# ABOUT GREE

Gree Electric Appliances, Inc. of Zhuhai was founded in 1991 and was listed on the Shenzhen Stock Exchange in November 1996. At the beginning, Gree was only a company that assembled residential air conditioners. Now it has grown into a diversified global technological industrial group that has expanded its business to air conditioners, home appliances, high-end equipment and communication equipment under three brand names: GREE, KINGHOME and TOSOT. Gree was the number one brand of air conditioners in the world in 2021\*.

Thanks to 500 million users' choices, Gree brands are sold widely to more than 180 countries and regions.

Action makes the future and innovation makes achievement. Looking forward, Gree will press ahead with its business philosophy of passion, innovation and realization. We aim to build a centenary air conditioning enterprise and create a better life for humankind.

- 2015 • Gree's sales revenue exceeded **15.08 billion** USD.
- 2016 • Gree's sales revenue exceeded **16.51 billion** USD.
- 2017 • Gree's sales revenue exceeded **22.21 billion** USD.
- 2018 • Gree entered into the list of **Forbes Global 2000** again and ranked **No. 294**, moving up 70 places compared with the previous year. Gree's sales revenue exceeded **30.23 billion** USD.
- 2019 • Gree entered into **Fortune Global 500**. Gree's return on equity ( ROE ) ranked the first among the 129 Chinese enterprises on the list.
- 2022 • Gree ranked the **487th** on the list of Fortune Global 500.

\*Gree is the number one brand of air conditioners in the world in 2021

# R32 INVERTER SERIES

U-Match Series Air Conditioners fall between residential air conditioners and central air conditioners. Their capacity scope is wider than that of residential air conditioners: from 12KBtu/h to 60KBtu/h. Indoor units of floor ceiling type, duct type and cassette type are available. Their installation is simpler than that of conventional central air conditioners, with low installation cost and no need of welding. They are well suited to the areas from 16m<sup>2</sup> to 140m<sup>2</sup>, such as apartments, villas, hotels and offices.

## 1 All DC Inverter System

### DC Inverter Compressor

» Incorporated with 180° sine wave stepless speed regulation control, this compressor is more energy-saving. It can perform stepless regulation of capacity output in different working conditions with a frequency adjustment range of 0-120Hz.

### DC Electronic Expansion Valve (EXV)

» The system adopts EXV throttling control in a stepless way with EXV opening ranging from 0 to 480P. It can accurately control refrigerant flow to suit different working conditions and workload, with over 5% energy efficiency increase compared to traditional fixed throttling method.

Note: DC power supply only

### DC Water Pump

» DC design and 12V weak current control lead to 40% higher efficiency and safer operation compared to conventional AC water pumps.

Note: DC power supply and for cassette units only.

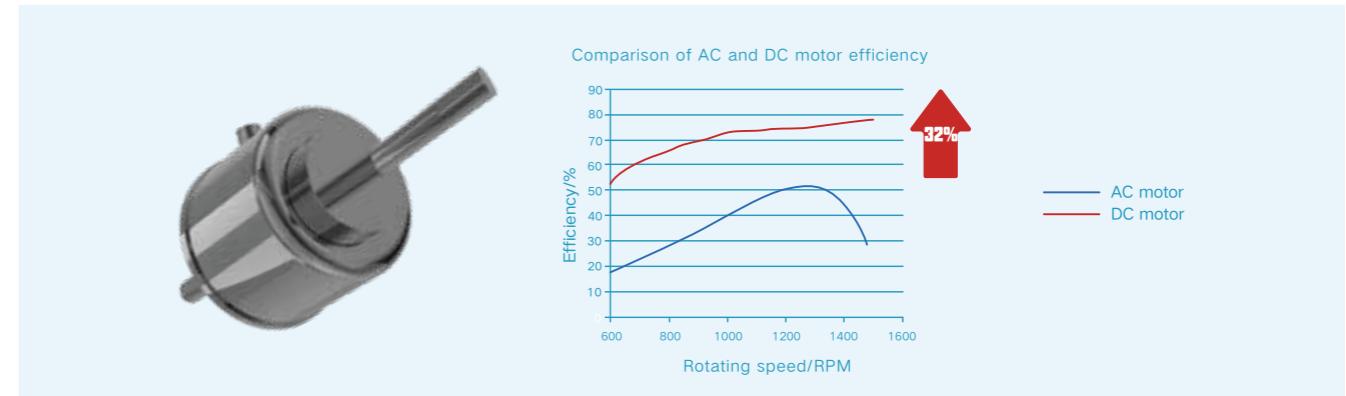

### DC Brushless Motor (outdoor)

» Thanks to the high-efficiency DC inverter design and high-power density structure, the outdoor motor has less magnetic flux leakage and less loss. Motor efficiency is 32% higher than that of conventional AC motors.

### DC Brushless Motor (indoor)

## 2 Health Protection

### Fresh Air Control

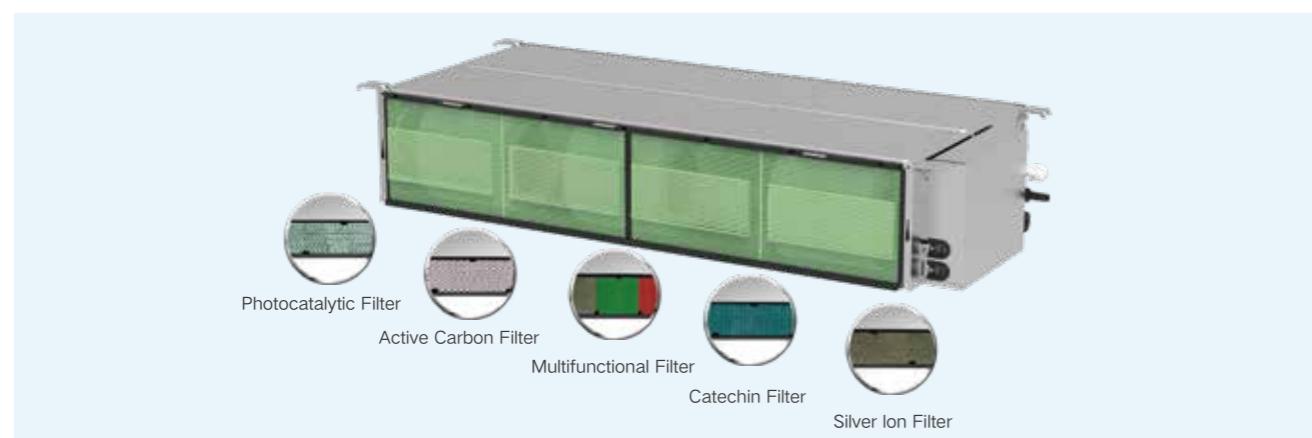

- » Duct units and floor ceiling units of the entire series are equipped with fresh air inlets. They can introduce 8%~12% fresh outside air into the room to ensure fresh indoor air.
- » For cassette units with large panels, we offer optional fresh air accessories which can effectively bring in 5%~10% fresh outside air.

### Various Options of Sterilization Filters

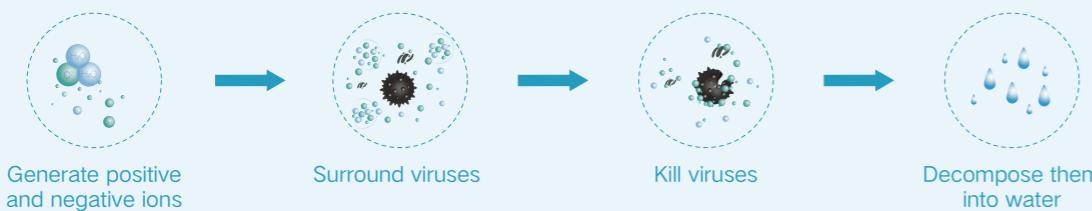

- » Different choices of sterilization modules are offered to be installed on the filter (e.g. catechin, active carbon, etc..)

Note: Applicable to duct units of 35, 50, 140, and 160 only.

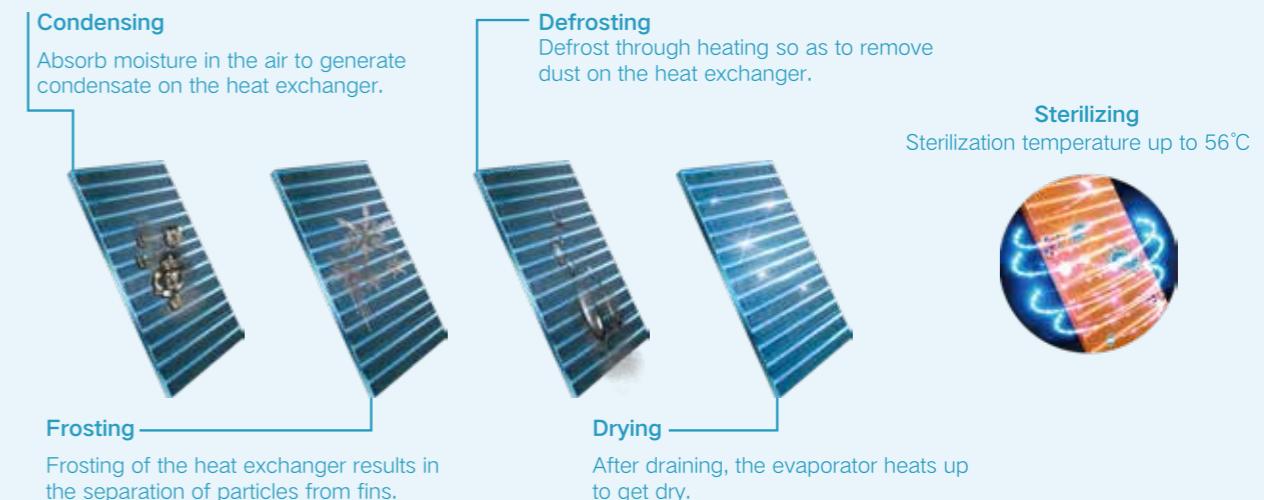

### Plasmacluster Ion Sterilization

Through high-voltage discharge of the plasmacluster ion module, the air is ionized and it generates a large number of ions, which then combine with bacteria and viruses to make them inactivated.

### 56°C Self-cleaning System

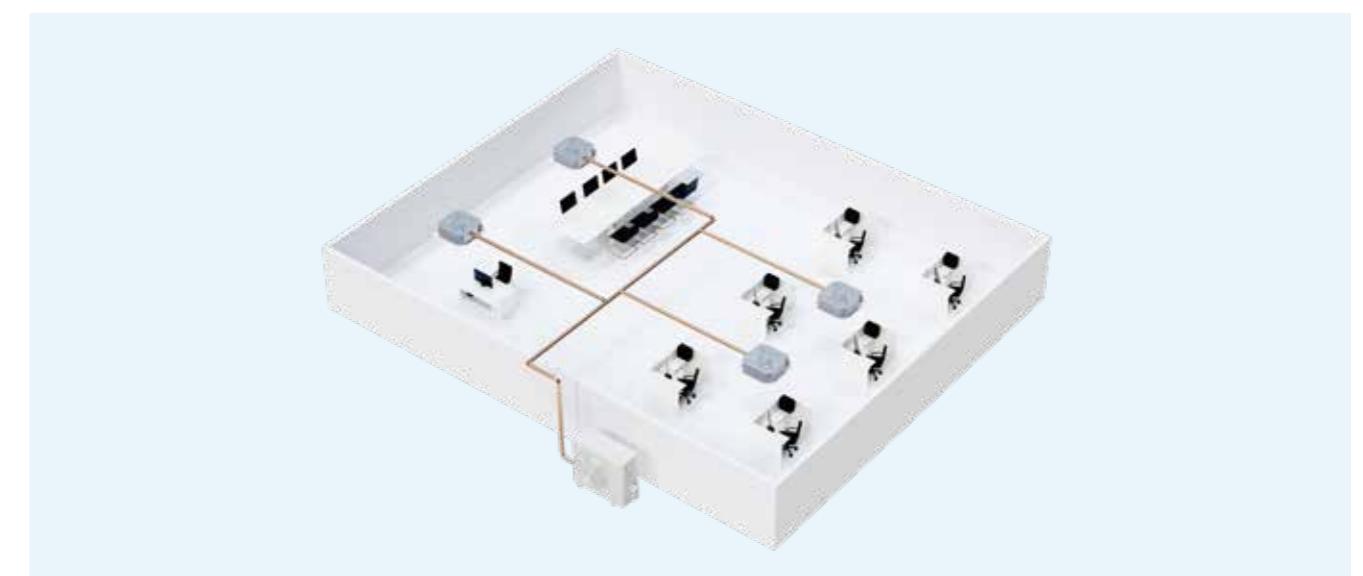

- » Gree high-temperature self-cleaning system with 5 stages of deep cleaning can effectively clean away dust and dirt on the evaporator and then automatically enter the stage of high-temperature sterilization, to make the air cleaner and healthier.

## 3 Intelligent Control

### Multi-split Application (No Kit Needed)

- » U-Match VI adopts two composite communication networks – LNS Bus and HomeBus – so that one outdoor unit can be matched with one or multiple duct/floor ceiling/cassette indoor units and achieve balanced air supply in the installation place, which has solved the problem of uneven temperature distribution in commercial places installed with large capacity units. While the comfort is improved, and engineering installation is also more convenient. There is no need to have an extra kit for multi-split application, which saves the space for outdoor unit installation.

## 4 Energy Saving

### Why you still feel hot after the AC is set to a comfortable temperature of 27°C?

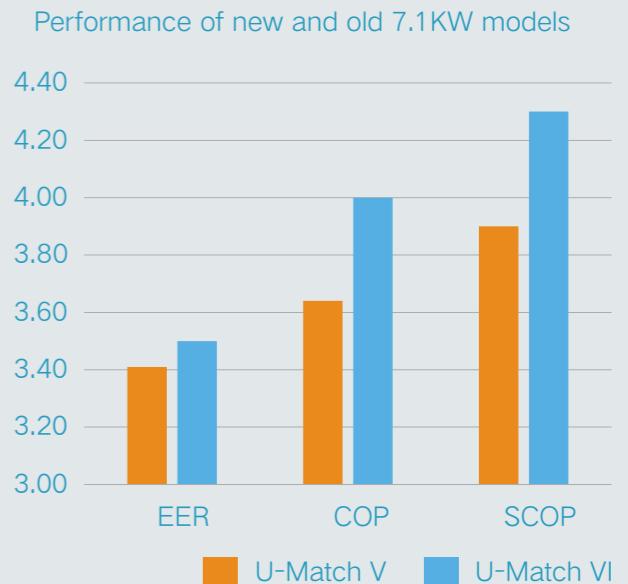

» Perceived temperature is not only affected by ambient temperature but also air humidity. Even the ambient temperature is the same, people feel differently depending on the humidity.

### SCOP up by 10.3%

» U-Match VI adopts R32 refrigerant. Thanks to the high-efficiency structural design, all DC inverter control, high-efficiency compressor and motor, optimized wind field design and enhanced heat exchange technology, they can achieve 10% energy savings on average compared to the last generation.

SCOP up by  
10.3%

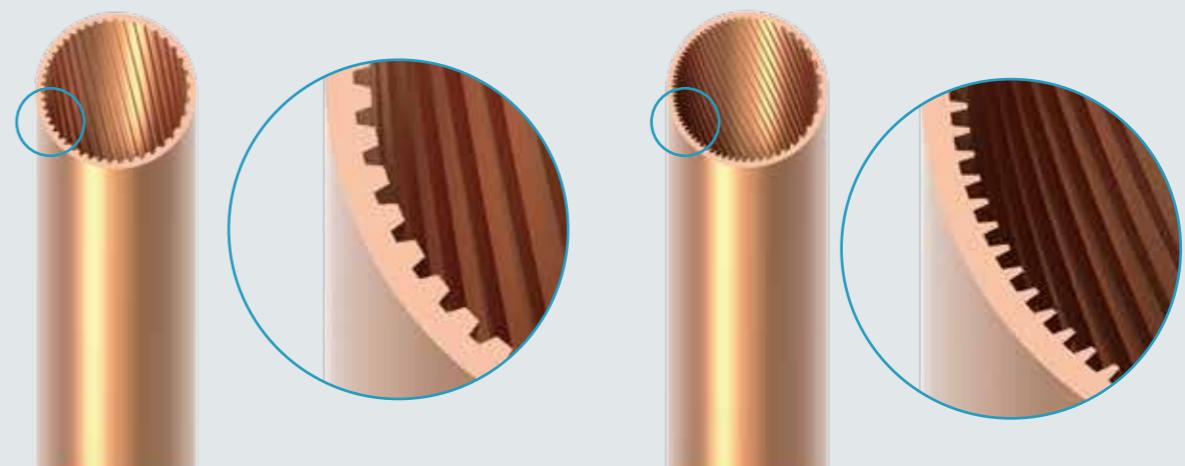

### Temperature and Humidity Correction Technology

» The wired controllers adopt high precision temperature and humidity dual sensors ( $\pm 0.5^{\circ}\text{C}$ ) as standard, to fully consider the impact of humidity on thermal comfort and improve the level of comfort through intelligent correction of indoor temperature and humidity.

### Enhanced Heat Exchange Design

» The newly designed internally threaded copper pipe can effectively improve heat exchange performance. **Smaller addendum angle** helps to increase the internal heat transfer area; **Larger helix angle** helps to improve turbulence intensity and enhance convective heat transfer; **More teeth**, larger internal heat transfer area, and higher heat exchange efficiency.

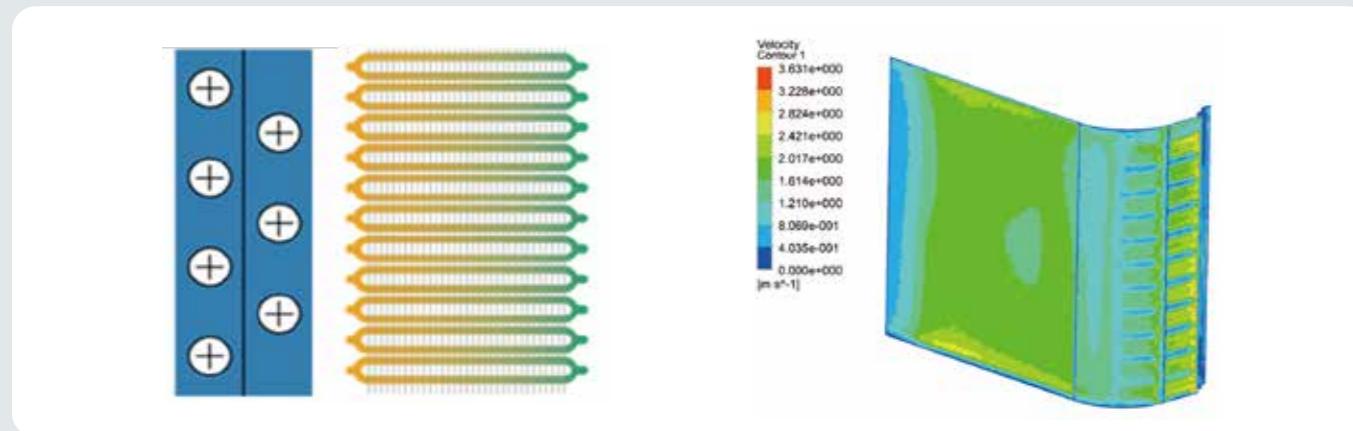

U-Match V

U-Match VI

## 5 Energy-saving Operation and Control

### Enhanced Heat Exchange Design

» The low resistance distribution type sub-cooling flow path, new type fins and optimized wind field design also contribute to the increase of heat exchange efficiency.

### High Efficiency DC Motor

» With high magnetic density, this 10 pole-pair rotary DC motor is 32% more efficient than a conventional AC motor.

### Wind Field Optimization

» **Low wind resistance grille:**  
2% increase in air volume by adopting the "raindrop" grille and rotating divergent low wind resistance structure.

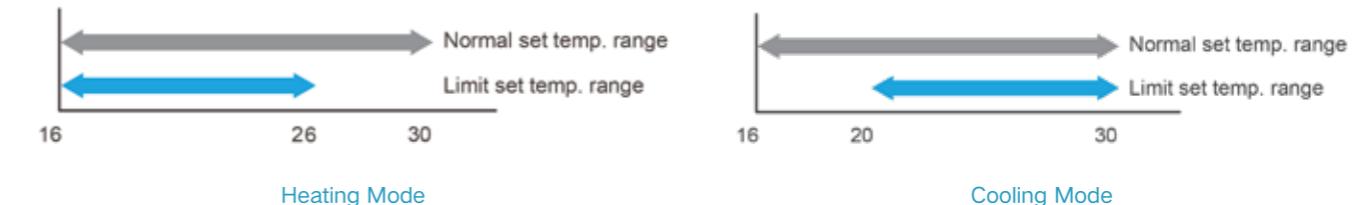

» **Low wind resistance motor support:**  
The U-shaped motor support results in 55% decrease in windward area and 1.5% increase in air volume.

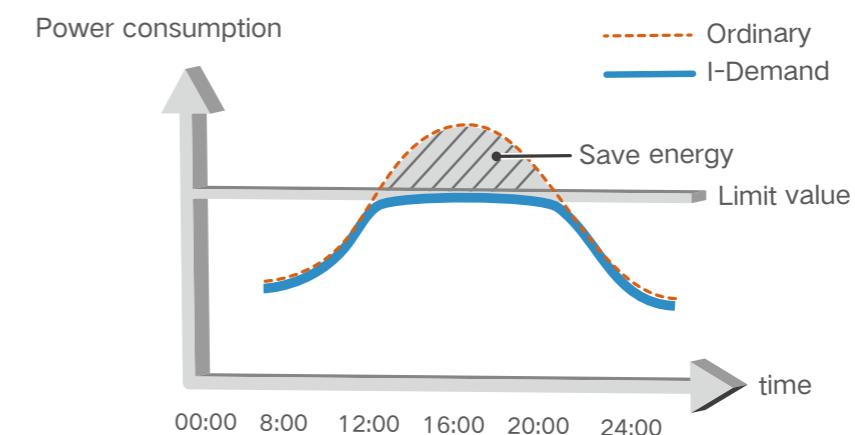

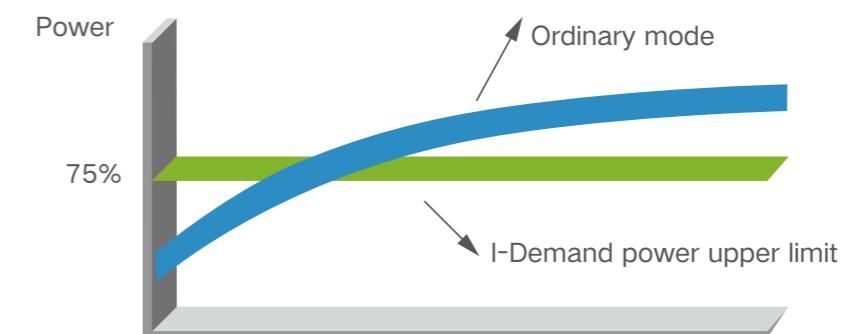

### Energy-saving Mode (Wired Controller)

» Energy-saving mode is available on our specialized wired controllers. Lower and upper temperature limits can be set for cooling and heating. Visitors can be restricted from setting the temperature too high or too low for saving energy in public places.

### I-demand

» This function enables the air conditioner to operate at less than 75% rated power. For some places, the government may have restrictions in power use during peak hours. This can save energy while relieving power consumption stress caused by full load operation.

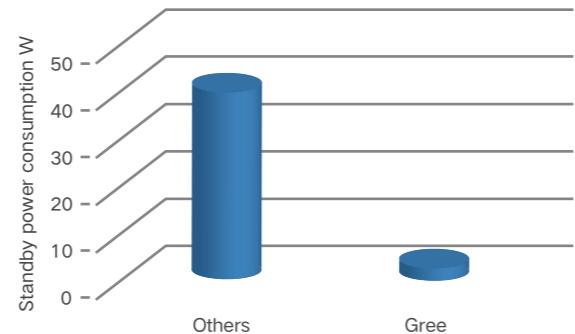

## 6 Quiet Design

### Low Power Consumption Standby Mode

» U-Match VI adopts the advanced technology of wake-up circuit and intelligent winding heater instead of the conventional compressor crankcase heater.

Compressor winding heater featuring intelligent control and high efficiency

### Smart Sensor

» Cassette units can perform smart control when installed with the optional smart sensor panel.  
✓ When people are away, the AC can automatically adjust temperature to save energy.  
✓ When people are away for a long time, the AC will automatically shut down to avoid wasting resources.

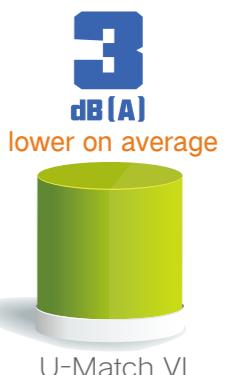

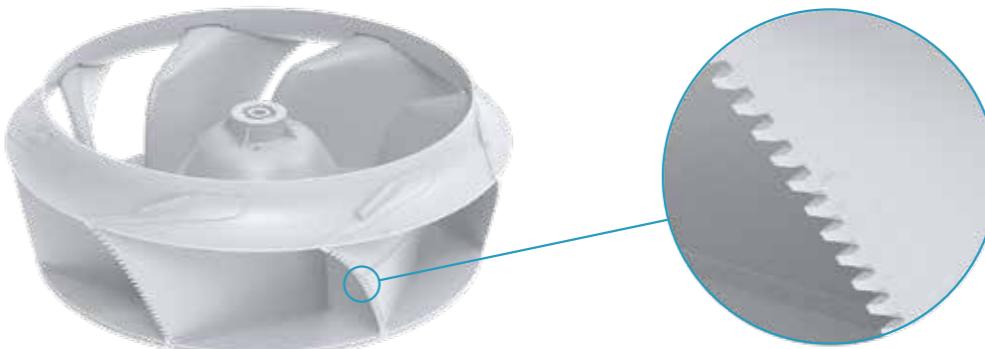

### 8°C Heating

» In winter, if you are away for a long time, the room will become very cold. After this function is enabled, the unit can maintain room temperature at 8°C, to care for your pets and plants.

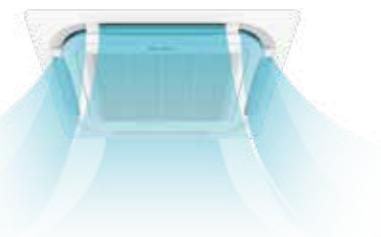

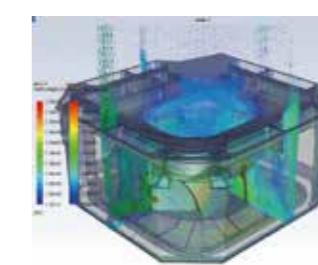

### Bionic Fan Blade Design for Lower Noise

» Noise is down by 3dB(A) through the optimization of the fan blade profile. Based on a full analysis of the low resistance and silent characteristics of birds flying at high speed, the fan blades are designed with the shape of eagle wings to improve the air flow on the surface of the blade rotating at high speed, and to suppress the trailing edge noise intensity of the blade for lower noise; The tail of the blade imitates the serrated shape of eagle wings, with excellent aerodynamic performance and low noise after repeated optimization through software simulation.

### Low Noise Wind Field

» Large circular air duct: less wind resistance, lower sound level.  
» Turbulence prevention design: optimized diffuser inlet, larger opening for air return, less turbulence.  
» Increased air inlet/outlet area: larger area for air intake and discharge with the same product size; lower fan speed for low sound level; air outlet area increased by 11.9% for cassette units with large panels.

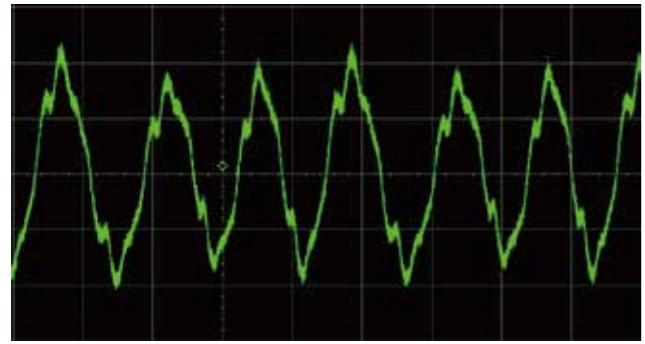

Note: Take the cassette unit for example.

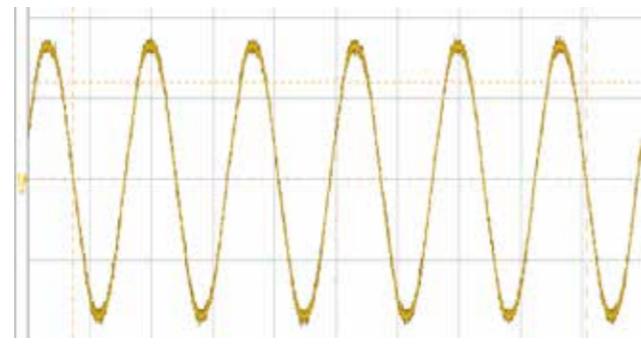

## 7 Enhanced Comfort

### Low Noise Drive Control

» The optimized fan drive control algorithm reduces the operating current harmonics of the fan to achieve smooth sine wave output, ensuring less vibration and noise for the motor.

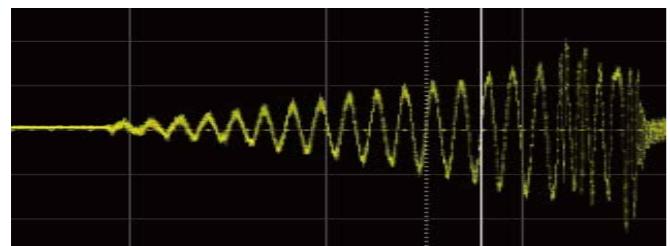

Others: current harmonics not smooth, resulting in low efficiency and loud noise

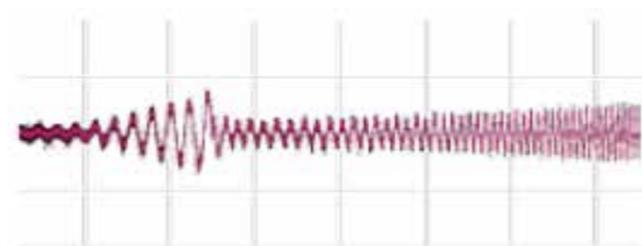

Gree: smooth sine wave output, resulting in high efficiency and low noise

### Low Voltage Start-up

» Thanks to auto compensation adaptive technology, the compressor can still start up normally when input voltage is down to 175V.

Others: fail to start up at low voltage.

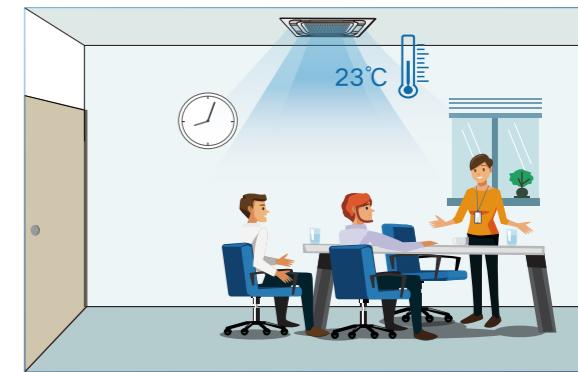

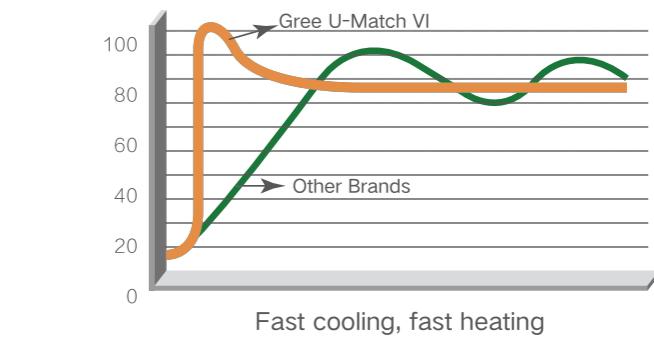

Gree: able to start up and operate stably at low voltage.

### Fast Cooling & Heating

» By detecting the set temperature, indoor and outdoor ambient temperatures, it will automatically enable fast cooling or heating, which is 20% faster than standard cooling or heating.

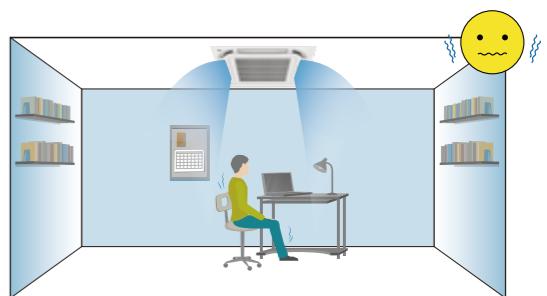

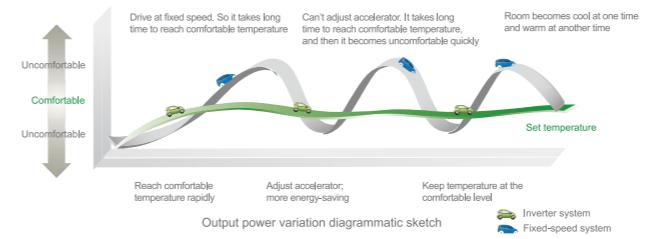

08:00

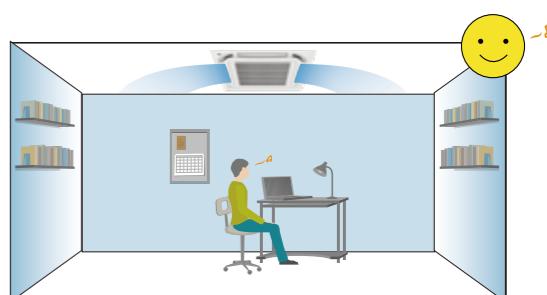

08:05

### Stable Temperature Control

» U-Match VI provides stable temperature control and more comfortable user experience by adopting DC inverter compressors with variable capacity output, DC motors with stepless speed regulation, electronic expansion valves with accurate flow control ranging from 0 to 480P, and ambient temperature sensing technology with a precision of  $\pm 0.5^{\circ}\text{C}$ .

Fixed-speed air conditioner

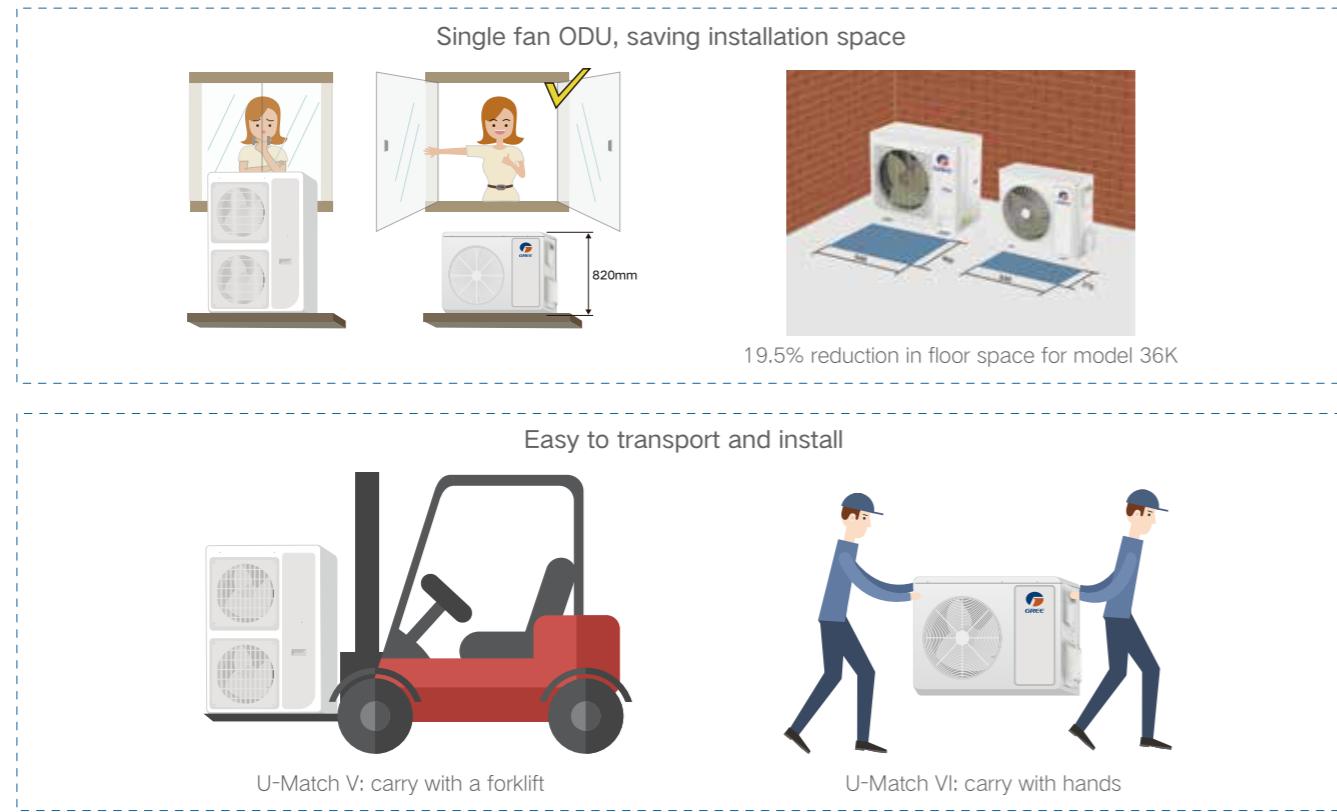

DC inverter air conditioner

## 8 Convenient Installation & Maintenance

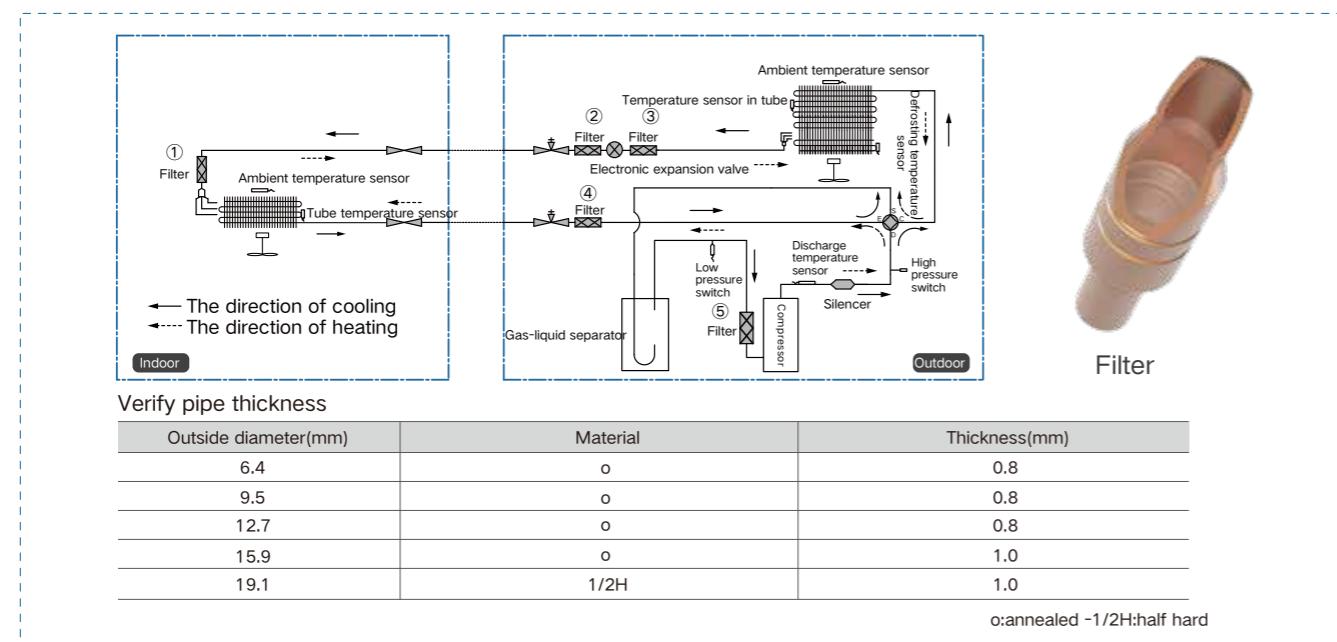

### Compact & Lightweight

» Unified appearance, single fan design and compact structure for outdoor units of the whole series; Thanks to compact size, they are easy to transport and install.

### Reusable Connection Pipe

» The system adopts multiple filtration technologies to reduce particles in the pipeline to the maximum extent, thus cleaning the pipeline and ensuring the repeated usage of connection pipe in the system of the old air conditioners. The wall thickness of pipeline shall meet the following conditions.

Note: High-pressure purge is required for old pipelines.

### Unified Power Supply & Long Piping Length

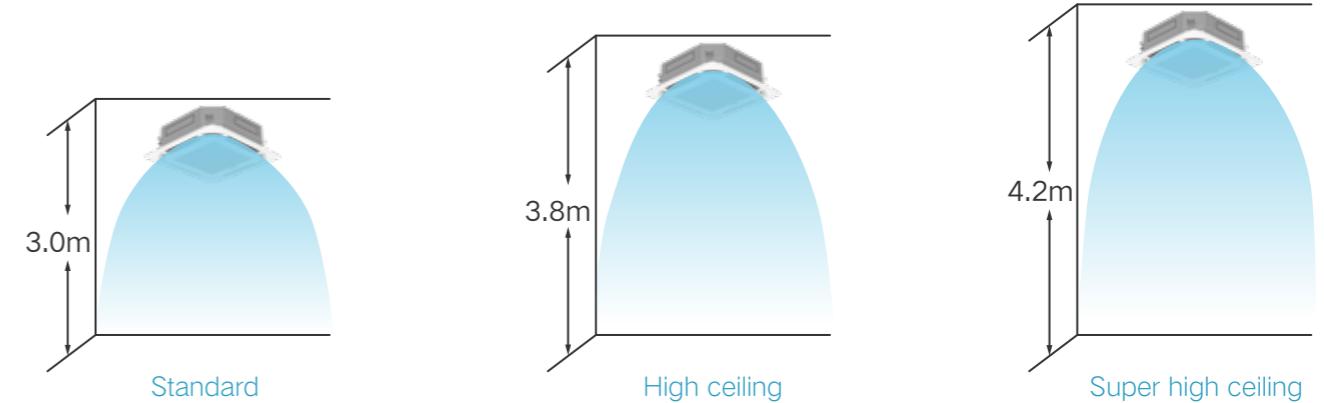

» It is convenient to connect wires with the long-distance power line communication technology and unified power supply from the outdoor unit to indoor units. Up to 75m piping length and 30m height difference.

\*Note: Unified power supply from ODU.

### Convenient for High Ceilings

» Cassette units offer 11 different fan speeds for selection. During installation, you can choose a proper fan speed according to the height of the ceiling to guarantee the suitable air supply distance.

## Convenient for Wiring and Piping

» **Auto fault diagnosis:** Equipped with micro-computer processing, the unit can automatically diagnose faults and display corresponding error codes (on the LED panel of the indoor unit, main board of the outdoor unit and the wired controller), for the convenience of maintenance.

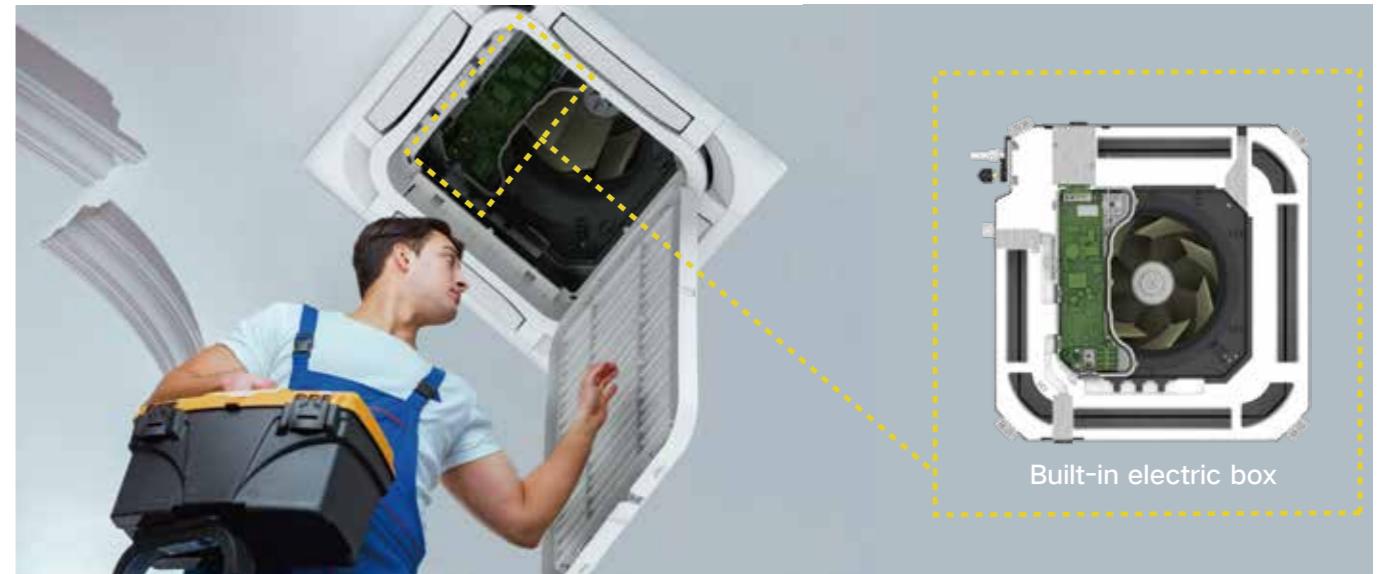

**Easy wiring:** Wires can be connected by detaching the handle. There is no need to open the front panel.

**Easy piping:** The entire range offers external valves, all with protective covers, for the ease of pipe connection.

**Integrated front cover plate:** Simple appearance, less components, and easy for disassembly.

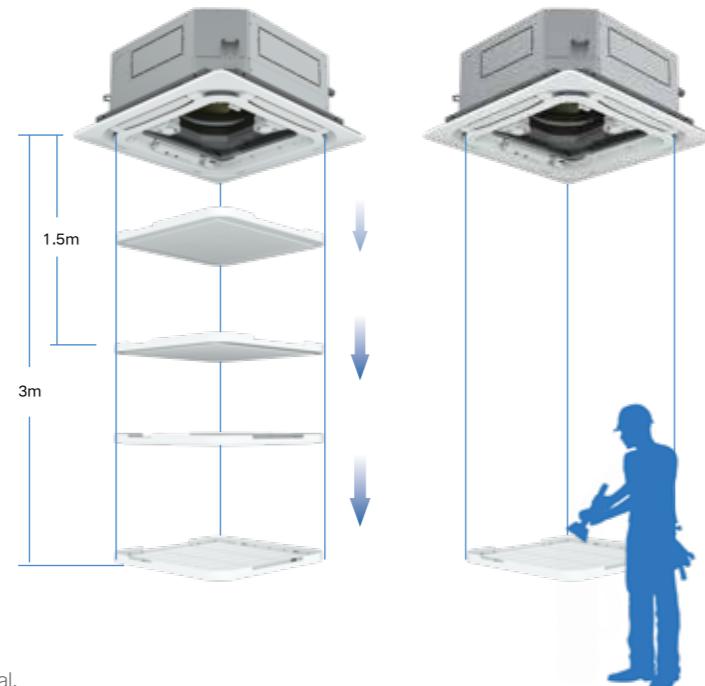

## Electric Box Designed for Easy Disassembly and Servicing

» The built-in electric box is standard for the entire product range. To carry out maintenance, just open the grill – there is no need to remove the ceiling, saving time and labor.

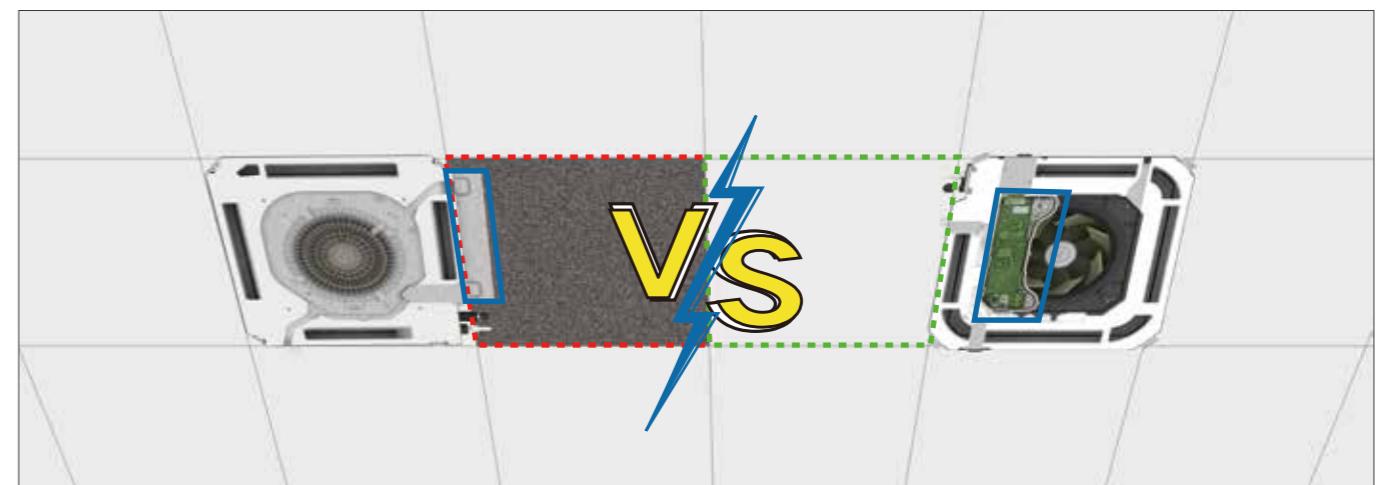

## Auto Lifting Panel

» Auto lifting panel is optional for cassette units with large panels. To clean the filter, you can lower it to a designated height just by pressing a button. Filter cleaning is simpler and safer.

\* Note: The lifting panel is optional.

### External electric box:

Installation and maintenance is not convenient and will affect the ceiling's appearance.

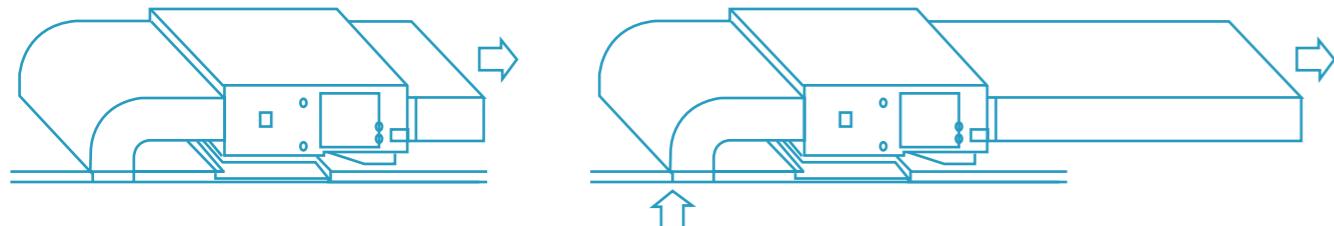

- During installation, the ceiling has to be cut open so as to have a service access port.
- To open the electric box for engineering wiring, it is necessary to disassemble the panel and service access port.

### Built-in electric box:

Installation and maintenance is convenient. There is no need to remove the ceiling.

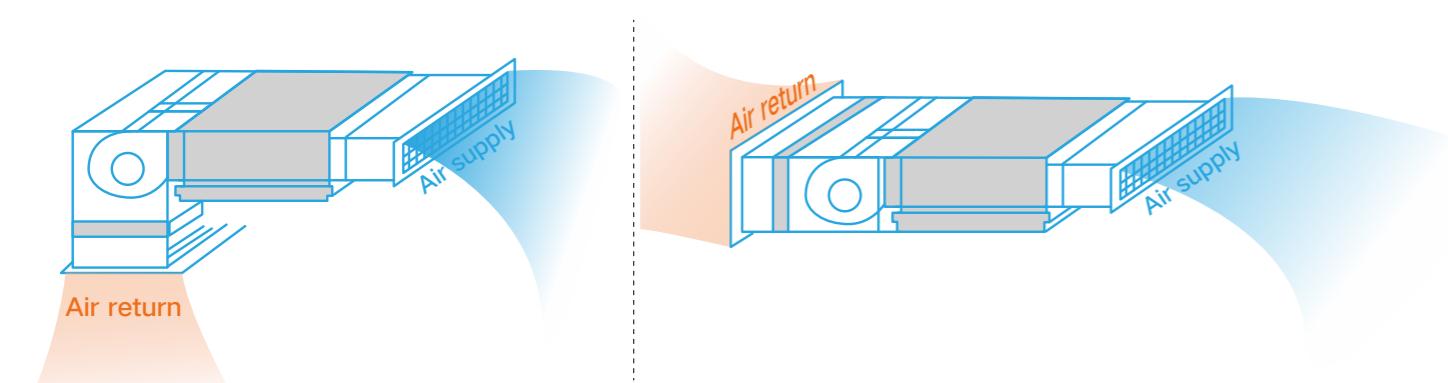

## Adjustable ESP

» Up to 9 static pressure stages with a maximum of 200Pa can be set for high static pressure duct type units. You can choose a proper static pressure according to the air duct length.

## Alterable Air Return Modes for Duct Unit

» There are two air return modes to be chosen for engineering installation: bottom air return and rear air return.

## Project Debugging

» Monitor and store underlying operational data.  
» Check and set operation modes.

Portable debugger\*

Parameter debugging and auto fault diagnosis

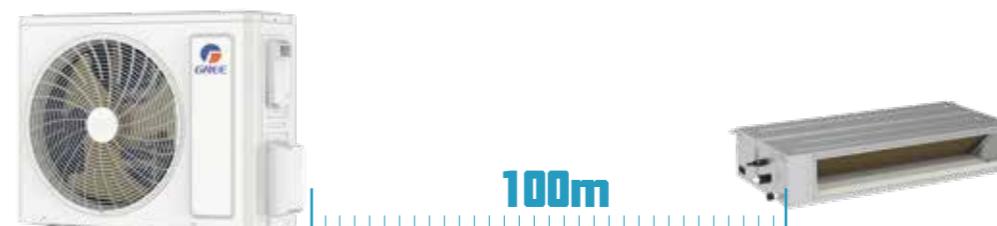

Monitoring and debugging software\*

» Remotely monitor operating status and parameters.  
» Store underlying operational data in real time.

\*Note: It is under development. Please refer to the actual product and consult our sales personnel before placing an order.

## Long Communication Distance

» Thanks to the new technology of long-distance power line communication, the distance between indoor and outdoor units can reach 100m, suitable for different kinds of residential and commercial applications.

Note: This is only for models of 7.1kW or above.

## Composite Communication Network

» Based on the features of connecting one outdoor unit to one indoor unit, we adopt two composite communication networks: LNS Bus and HomeBus.

### BUS1 : LNS Bus

Product upgrading: with the latest-generation long-distance power line communication technology, the outdoor unit can work with different types of indoor units at the same time, including duct units, cassette units, floor ceiling units and wall-mounted units. They can meet the needs in different applications as the communication distance has been greatly improved.

### BUS2: Terminal Control Bus

Control upgrading (wired/centralized control, etc.): HBS communication technology is used for indoor units and display terminals. The control terminals are applicable both to U-Match and GMV units, for the ease of centralized control for multiple units and the connection between one outdoor unit and multiple indoor units.

## Anti-interference Design

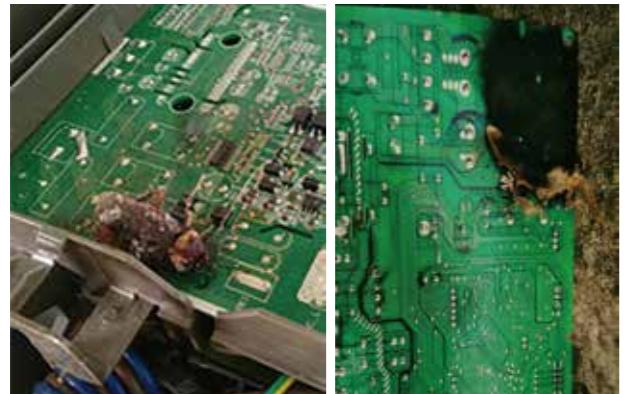

» Double-loop design can effectively prevent communication interference caused by stray capacitance and electric power harmonics in long-distance communication, ensuring reliable data transmission.

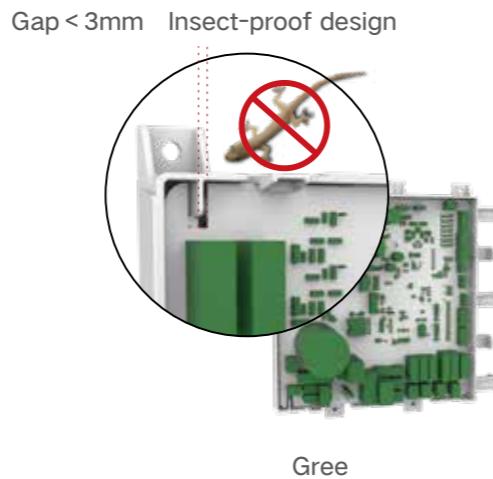

## 9 Reliability

### Electric Box Insect-proof

» The gap between the PCB and the electric box is less than 3mm, which can prevent insects from getting in and causing short circuit and damage to the circuit board.

Others

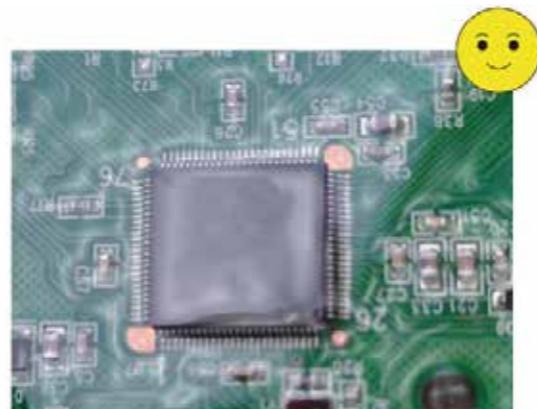

Gree

### PCB 3-layer Anticorrosion Coating

» PCB boards of outdoor units all have three layers of anticorrosion coating, which can prevent moisture, insects and dust.

Before coating

After coating with three anticorrosion layers

### Wired Controller Moisture-proof

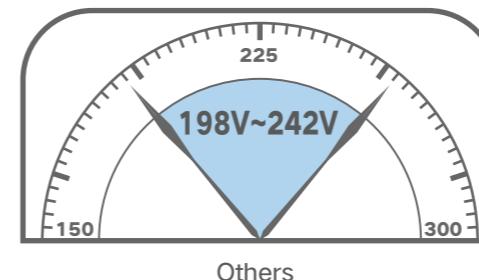

» The wired controller adopts double moisture-proof sealing designs, which can effectively protect the PCB from dampness.

Responsive and water-proof touch buttons, with long service life.

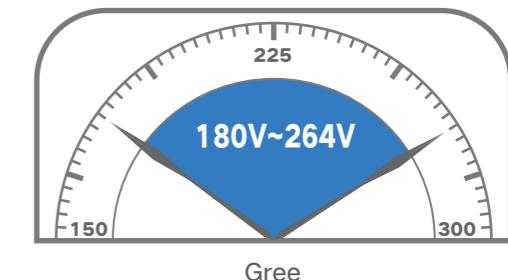

### Operation Reliability Design

» **Wide Voltage Range:** Through the optimization of drive and electronic control parameters, U-Match VI can operate in a wide voltage range and run normally even if the voltage is down to 180V. They can be used in islands or places with unstable power supply.

Others

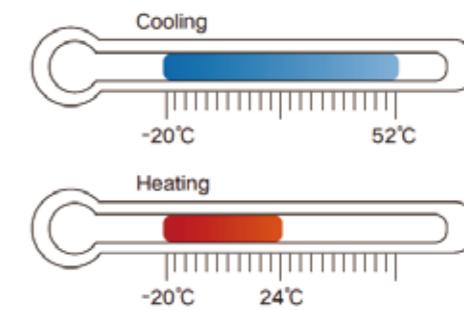

Gree

» **Cooling at Ultralow Ambient Temperature:** With an operation range down to -20°C in cooling, U-Match VI are applicable to close control rooms or other special places where cooling is needed all year round. You can choose Gree dry contact gateway and make two sets of units run alternately to provide 24h uninterrupted cooling.

\*Please consult our salespersons for a specific operation plan before placing an order.

» **Wide Operation Range:** The cooling system equipped with all DC inverter technology adopts stepless speed regulation for its compressor and fan motor and accurate flow control for the electronic expansion valve, which ensure reliable operation in a wide operation range, making the units well-suited to a wider range of applications.  
Ambient temperature range for cooling: -20°C~52°C  
Ambient temperature range for heating: -20°C~24°C

# R32 Inverter Series (Heat Pump) (EU)

 INVERTER  R32

U-MATCH is an air conditioning product in which the outdoor unit is generally designed to be matched with different types of indoor units (duct type, cassette type, floor ceiling type), saving the cost of warehouse management and after-sales maintenance.

The cooling capacity ranges from 3.5kW to 16kW, applicable to houses, hotels, restaurants, stores, office buildings, etc.

- » SEER up to 7.20 and energy efficiency rated at A++ for the whole series thanks to all DC inverter system and high-efficiency casing design, leading to 10% energy savings on average compared to the last generation.
- » 5H health protection: fresh air provision for the entire range of indoor units, optional healthy and sterilizing accessories, multiple air purification methods to ensure quality air in real time.
- » Originally designed bionic fan blades and low noise compressor lower indoor unit sound level to 28dB.
- » Adopt high precision temperature and humidity dual sensors ( $\pm 0.5^{\circ}\text{C}$ ) to fully consider the impact of humidity on thermal comfort, reduce excessive dehumidification and substantially improve the level of comfort through intelligent correction of indoor temperature and humidity.
- » WiFi module for remote APP control; smart sensor, with 360° temperature field detection, can automatically adjust airflow direction and the air conditioner's operation status by detecting the positions of occupants in the room.
- » When installing the unit, wiring and piping can be done without opening the casing, saving installation time.
- » Single fan compact design for outdoor units of the whole series, for the ease of transportation and installation
- » Provide different debugging tools, for example, the portable debugger, which can monitor real-time operating parameters, set unit parameters and store underlying data; the monitoring and debugging software, which can remotely monitor operating conditions and parameters. After-sales personnel can check the monitored data to locate errors. Troubleshooting is more accurate and efficient.

## Indoor Unit

### Duct type

- » DC motor, energy-saving and high efficiency.
- » Fresh air unit can be connected.
- » Lift of water pump is 1000mm.
- » Energy efficiency can be up to A++ in cooling season and A+ in heating season.

### Cassette type

- » 360 ° air discharge for balance room temperature.
- » DC motor and DC water pump, energy-saving and high efficiency.
- » Fresh air unit can be connected.
- » Lift of water pump is 1000mm.
- » Energy efficiency can be up to A++ in cooling season and A+ in heating season.

### Floor ceiling type

- » DC motor, energy-saving and high efficiency.
- » Fresh air unit can be connected.
- » Lift of water pump is 1000mm.
- » Energy efficiency can be up to A++ in cooling season and A+ in heating season.

### Wall-mounted

- » DC motor, energy-saving and high-efficiency.
- » Energy efficiency can be up to A++ in cooling season and A+ in heating season.

## R32 Inverter Series (Heat Pump) (Non-EU)

U-MATCH is an air conditioning product in which the outdoor unit is generally designed to be matched with different types of indoor units (duct type, cassette type, floor ceiling type), saving the cost of warehouse management and after-sales maintenance.

The cooling capacity ranges from 3.5kW to 16kW, applicable to houses, hotels, restaurants, stores, office buildings, etc.

- » 5H health protection: fresh air provision for the entire range of indoor units, optional healthy and sterilizing accessories; multiple air purification methods to ensure quality air in real time.
- » Originally designed bionic fan blades and low noise compressor lower indoor unit sound level to 28dB.
- » Adopt high precision temperature and humidity dual sensors ( $\pm 0.5^{\circ}\text{C}$ ) to fully consider the impact of humidity on thermal comfort, reduce excessive dehumidification and substantially improve the level of comfort through intelligent correction of indoor temperature and humidity.
- » WiFi module for remote APP control; smart sensor, with 360° temperature field detection, can automatically adjust airflow direction and the air conditioner's operation status by detecting the positions of occupants in the room.
- » When installing the unit, wiring and piping can be done without opening the casing, saving installation time.
- » Single fan compact design for outdoor units of the whole series, for the ease of transportation and installation
- » Provide different debugging tools, for example, the portable debugger, which can monitor real-time operating parameters, set unit parameters and store underlying data; the monitoring and debugging software can remotely monitor operating conditions and parameters. After-sales personnel can check the monitored data to locate errors. Troubleshooting is more accurate and efficient.

### Indoor Unit

#### Duct type

- » Fresh air inlet and air valve control function improve the indoor air quality.
- » Flexible air inlet/outlet and condensing water outlet direction based on different installation requirements.
- » Optimized air duct design improves the performance and lowers the noise.
- » Built-in drain pump with increased lift of 1000mm.
- » High ESP design, max ESP is up to 200 Pa.

#### Cassette type

- » Drain pump filled as standard with increased lift of 1000mm.
- » Special low noise fan design.
- » Equipped with 360° air discharge panel, providing more comfortable air supply.

#### Floor ceiling type

- » 3D air flue design.
- » Modern and elegant appearance.
- » Four levels of fan speed.
- » Wide swing angles.

# R32 Inverter Series (Cooling Only)(Southeast Asia)

**INVERTER** **R32**

U-MATCH is an air conditioning product in which the outdoor unit is generally designed to be matched with different types of indoor units (duct type, cassette type, floor ceiling type), saving the cost of warehouse management and after-sales maintenance.

The cooling capacity ranges from 3.5kW to 16kW, applicable to houses, hotels, restaurants, stores, office buildings, etc.

- » 5H health protection: fresh air provision for the entire range of indoor units, optional healthy and sterilizing accessories, multiple air purification methods to ensure quality air in real time.
- » The original bionic fan blades and noise-reducing compressor can reduce the noise of indoor unit.
- » Adopt high precision temperature and humidity dual sensors ( $\pm 0.5^{\circ}\text{C}$ ) to fully consider the impact of humidity on thermal comfort, reduce excessive dehumidification and substantially improve the level of comfort through intelligent correction of indoor temperature and humidity.
- » WiFi module for remote APP control; smart sensor, with 360° temperature field detection, can automatically adjust airflow direction and the air conditioner's operation status by detecting the positions of occupants in the room.
- » When installing the unit, wiring and piping can be done without opening the casing, saving installation time.
- » Single fan compact design for outdoor units of the whole series, for the ease of transportation and installation
- » Provide different debugging tools, for example, the portable debugger, which can monitor real-time operating parameters, set unit parameters and store underlying data; the monitoring and debugging software can remotely monitor operating conditions and parameters. After-sales personnel can check the monitored data to locate errors. Troubleshooting is more accurate and efficient.

## Indoor Unit

### Duct type

- » Fresh air inlet and air valve control function improve the indoor air quality.
- » Flexible air inlet/outlet and condensing water outlet direction based on different installation requirements.
- » Optimized air duct design improves the performance and lowers the noise.
- » Built-in drain pump with increased lift of 1000mm.
- » High ESP design, max ESP is up to 200 Pa.

### Cassette type

- » Drain pump filled as standard with increased lift of 1000mm.
- » Special low noise fan design.
- » Equipped with 360° air discharge panel, providing more comfortable air supply.

### Floor ceiling type

- » 3D air flue design.
- » Modern and elegant appearance.
- » Four levels of fan speed.
- » Wide swing angles.

Note:

● means standard, ○ means optional.

\*This product model is under development. Please confirm the final specifications with sales representatives.

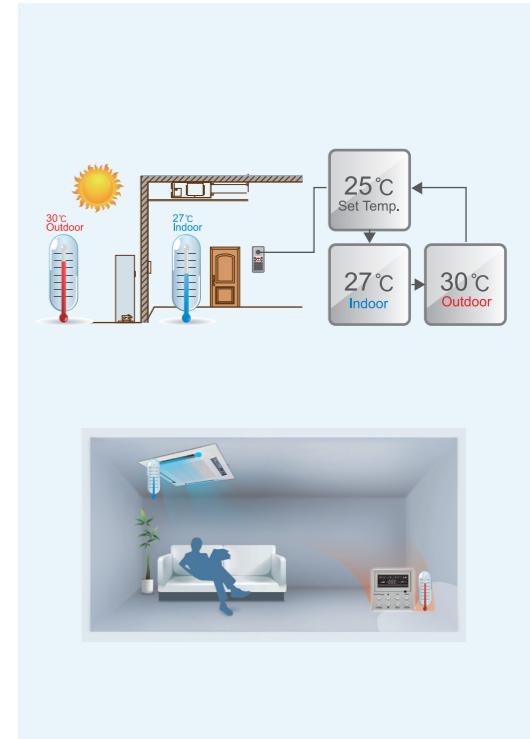

## U-MATCH

U-Match Series Air Conditioners fall between residential air conditioners and central air conditioners. Their capacity scope is wider than that of residential air conditioners: from 12Kbtu/h to 60Kbtu/h. Indoor units of floor ceiling type, duct type and cassette type are available. Their installation is simpler than that of conventional central air conditioners, with low installation cost and no need of welding. They are well suited to the areas from 16m<sup>2</sup> to 140m<sup>2</sup>, such as apartments, villas, hotels and offices.

## 1 More Convenient& Comfortable

### Multiple Temperature Displays

» Indoor set temperature, indoor ambient temperature and outdoor ambient temperature can be displayed. Meanwhile, the display of the three kinds of temperature can be switched freely through the remote controller or wired controller.

### Setting Function of Indoor Dual Temperature Sensors

» In order to better control indoor ambient temperature and improve user's comfort, dual indoor temperature sensors have been designed. Indoor unit and wired controller are equipped with the temperature sensors. The unit will automatically start the suitable temperature sensors according to the mode.

### Cold Air Prevention Function

» When the unit just starts heating or the outdoor unit just finishes defrosting, the temperature of indoor evaporator is quite low. If the indoor fan operates in this case, cold air will blow out. Our products are optimized in design to prevent cold air so as to improve user's comfort.

### Power-off Memory Function

» The user can set power-off memory function. If this function is activated, the unit will automatically operate in previous setting mode when power recovers after power failure.

### Low-temperature Cooling Function

» Although outdoor temperature is quite low in winter, some places with heat source(e.g. barbecue restaurant) still need cooling. Our unit is capable of cooling at outdoor ambient temperature of -15°C.

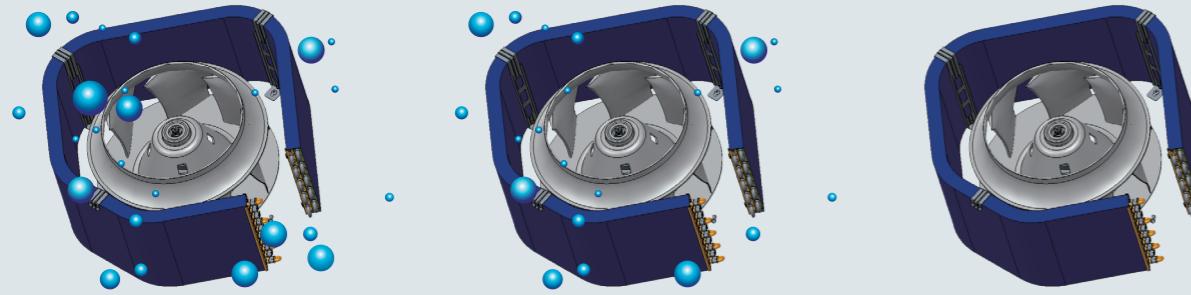

### Water Full Protection (Optional)

» If the water cannot drain out properly for the failure of water pump or other causes, this function will be activated automatically and the unit will stop for protection when the water in the indoor unit reaches a certain level.

## 2 Air Handling Function

### Mould Proof(X-FAN)

» Do you know that water in IDU will give birth to bacteria which will affect human health? U-Match will wipe out water, caring for your health!

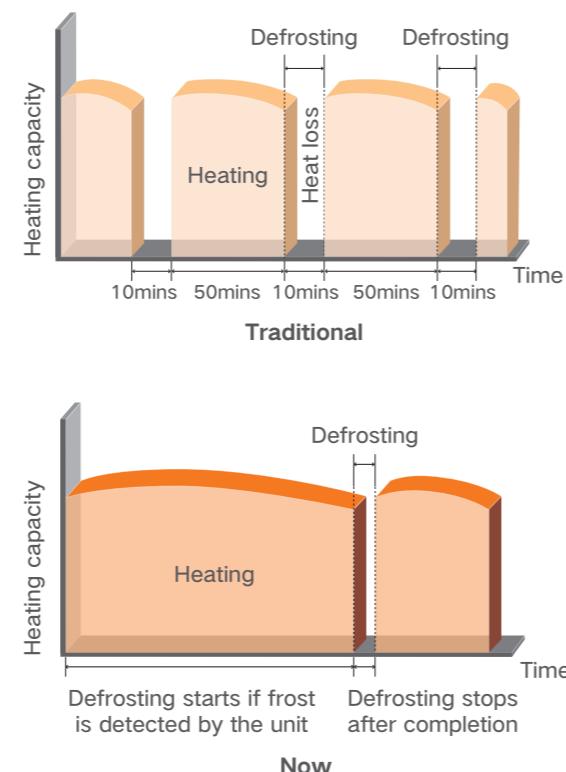

## 3 Safer & More Reliable

### Intelligent Defrosting

» Did you ever feel annoyed when the air conditioner stopped heating because of defrosting? This problem has already been resolved by U-Match. Unit only starts defrosting when it's necessary, which is more energy-saving and comfortable.

### Antifreezing Protection

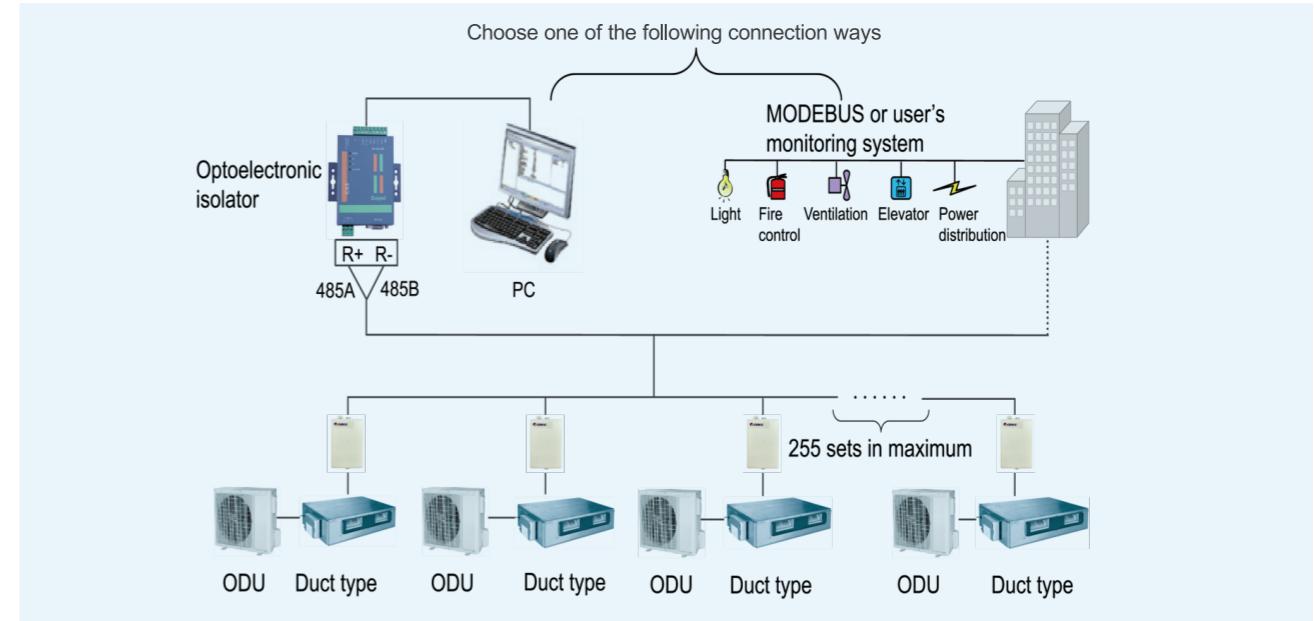

» If frost of outdoor condenser is detected by the unit, the compressor will stop for protection.

## 4 Centralized Control Function

### Building Management System Interface (MODBUS Protocol) and Long-distance Monitoring

» If the unit is to be connected with the building management system, please consult Gree for the development of MODBUS protocol. In this case, the unit operation information will be sent to the building management system in order to control and monitor the units.

### Centralized Control Function

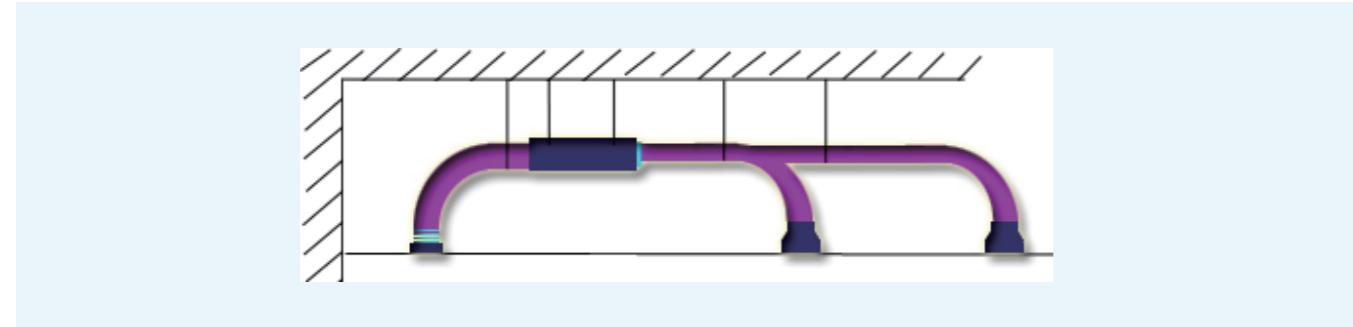

The indoor unit is equipped with the interface that can be connected with Centralized Controller, in order to realize central control of 36 units in maximum without connecting wired controller. It can control the on/off, mode, fan speed, temperature setting and timer of a single unit or a group of units.

## 5 Introduction of Indoor Units

### Duct Type Indoor Unit

» The static pressure can be adjusted within 0~150pa, applicable for various installation requirements.

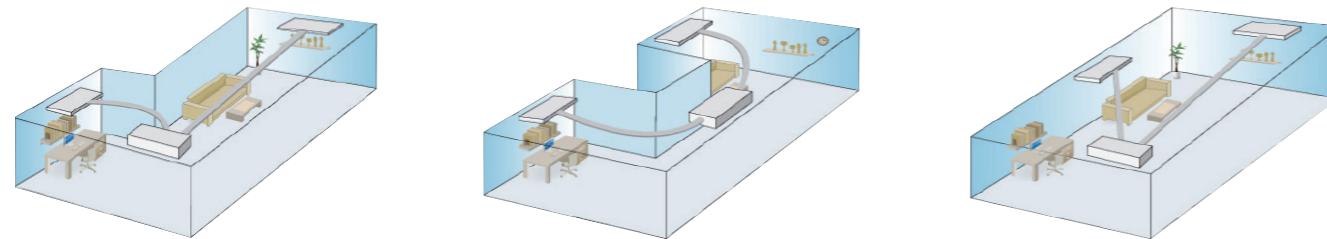

» Adjustable fan speed

Fan speed of indoor unit can be adjusted by wired controller and there are 4 kinds of speed (turbo, high, medium, low) to meet different requirements.

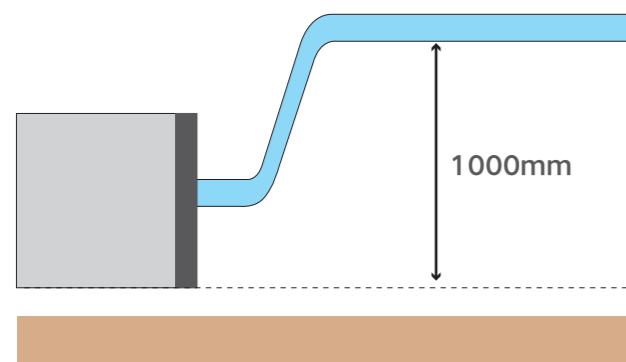

» Highly flexible installation

Highly flexible installation is possible to satisfy various needs.

» Flexible and easy to install in L shape, U shape and large rooms.

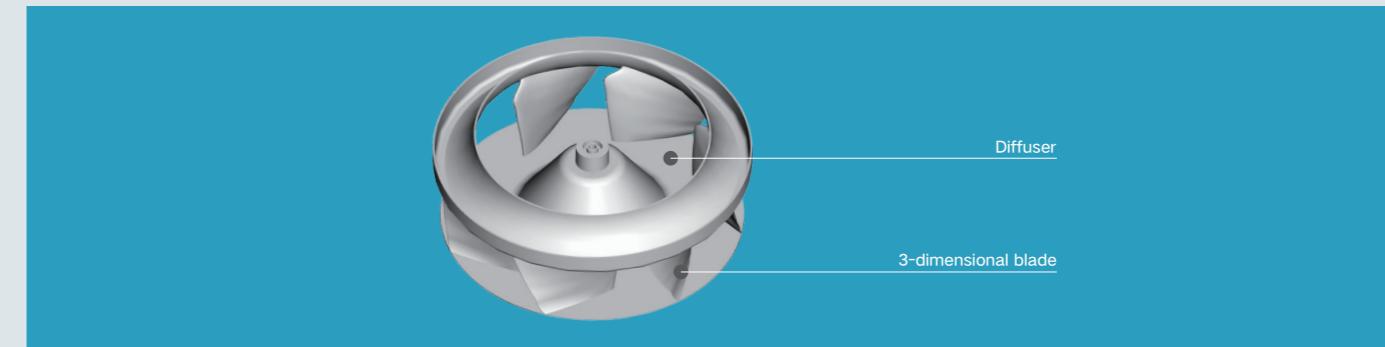

» Drain pump lift (Optional)

### Cassette Type

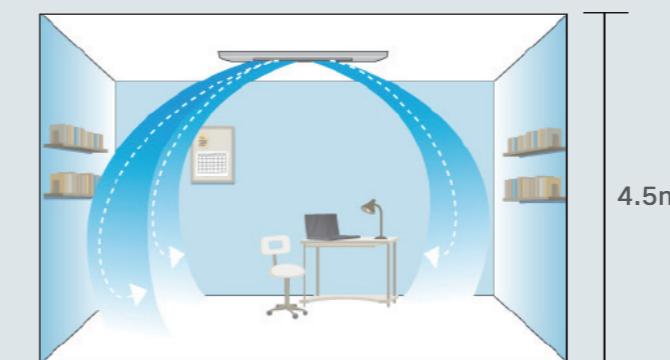

» Low noise with 3-dimensional blade

» High ceiling applications

24K~60K units are applicable to the height below 4.5m

» Units below 24K are applicable to the height below 3m.

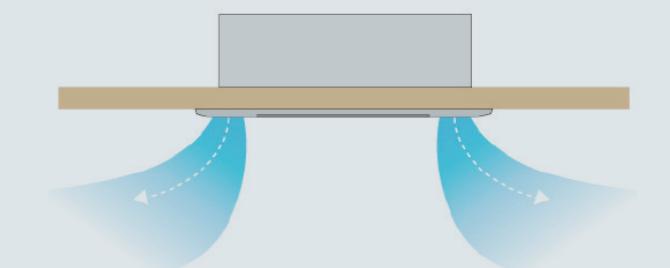

» Comfortable airflow

Air supply in different directions with 30~60 degrees of swing angle for even temperature distribution.

» Water drainage pump

Drain pump fitted as standard with increased lift of 1000mm.

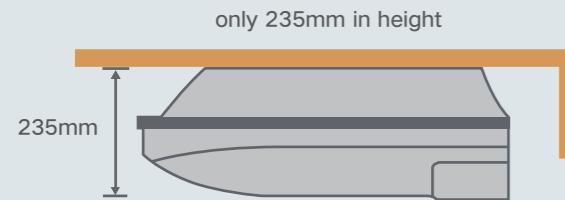

## U-Match Fixed Frequency Series (Heat Pump)

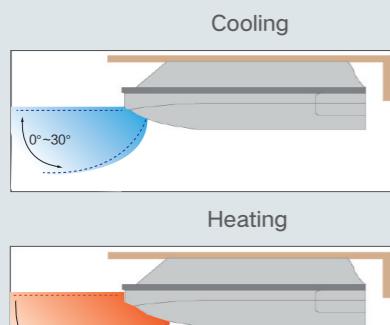

It is a kind of split system that the outdoor unit can be connected to various indoor units (duct, cassette or floor ceiling type) with cooling capacity from 3.5kW to 16kW.

### Floor Ceiling Type Indoor Unit

- » Compact design

- » Wide discharge range  
With cross-direction swing angle, the air supply range is wider.

- » Easy maintenance  
Convenient disassembly and maintenance thanks to the unique design.

- » Microcomputer control  
The complete control functions are controlled by microcomputer which not only shows all running modes and temperatures but also has functions like malfunction diagnosis and data search.

- » Flexible installation

There are 2 installation methods: installation on the ceiling or floor.

Ceiling Type

Floor Standing Type

- » Design of double ambient temperature sensors makes precise temperature monitoring.
- » With low ambient temperature cooling function, cooling is normal at -15°C.
- » The outdoor unit is universal and can be matched with duct, cassette and floor ceiling type indoor units.
- » The unit is designed with smaller dimension, which is easy to install and transport.

### Indoor Unit

#### Duct type

- » Fresh air inlet and air valve control function improve the indoor air quality.
- » Flexible air inlet/outlet and condensing water outlet direction based on different installation requirements.
- » Optimized air duct design improves the performance and lowers the noise.
- » Built-in drain pump with increased lift of 1000mm.

#### Cassette type

- » Drain pump filled as standard with increased lift of 1000mm.
- » Special low noise fan design.
- » Equipped with 360° air discharge panel, providing more comfortable air supply.

#### Floor ceiling type

- » 3D air flue design.
- » Modern and elegant appearance.
- » Four levels of fan speed.
- » Wide swing angles.

## Control System Lineup

Control system		Product series	Duct type	Cassette type	Floor ceiling type
Wired controller	XK117		●	○	○
	XE71-42/G		○	○	○
Remote controller	YAW1F9(WiFi) <sup>1</sup>		○	○	○
	YB1FA(MOTO)		○	○	○
	YAP1F6(WiFi)		○	○	○
WiFi module (G-Cloud) <sup>2</sup>	ME31-00/C4 ME31-00/C6		○	○	○
MODBUS gateway	ME50-00/EG(M)		○	○	○
Centralized controller (up to 36 indoor units)	CE52-24/F(C)		○	○	○
Dry contact gateway <sup>3</sup> (extended function board)	ME30-42/E1		○	○	○
Door controller	MK03		○	○	○
BACnet gateway	ME30-44/D2(B)		○	○	○

Note:  
● means standard, ○ means optional.

\*1: Controller(cooling only)

\*2: Please contact the sales representative for WiFi module selection.

\*3: Function: ON/OFF input control, emergency stop input, error output, cold plasma control,fresh air control.

## U-Match Fixed Frequency Series(Cooling Only)

It is a kind of split system that the outdoor unit can be connected to various indoor units (duct, cassette or floor ceiling type) with cooling capacity from 2.6kW to 16kW.

- » Design of double ambient temperature sensors makes precision temperature monitoring.
- » With low ambient temperature cooling function, cooling is normal at 5°C.
- » The outdoor unit is universal and can be matched with duct, cassette and floor ceiling type indoor units.
- » The unit is designed with smaller dimension, and the body weight of the whole series are less than 96kg, which is easy for installation and transportation.

### Indoor Unit

#### Duct type

- » Fresh air inlet and air valve control function improve the indoor air quality.
- » Flexible air inlet/outlet and condensing water outlet direction based on different installation requirements.
- » Optimized air duct design improves the performance and lowers the noise.
- » Built-in drain pump with increased lift of 1000mm.
- » High ESP design, max ESP is up to 200 Pa.

#### Cassette type

- » Drain pump filled as standard with increased lift of 1000mm.
- » Special low noise fan design.
- » Equipped with 360° air discharge panel, providing more comfortable air supply.

#### Floor ceiling type

- » 3D air flue design.
- » Modern and elegant appearance.
- » Four levels of fan speed.
- » Wide swing angles.

Note:  
● means standard, ○ means optional.<sup>1</sup>: Controller (cooling only)<sup>2</sup>: Please contact the sales representative for WiFi module selection.<sup>3</sup>: Function: ON/OFF input control, emergency stop input, error output, cold plasma control, fresh air control.U-Match  
Economical Inverter Series (Eastern Europe)

Cooling capacity is 3.5kW~16.0kW. The outdoor unit can be freely connected to duct type units, cassette type units and floor ceiling units.

High efficiency

All DC inverter technology

Compact design

Anti-cold function

Fresh air supply ventilation

Intelligent defrosting

Memory function

Easier maintainability

Turbo function

» Compact design; single fan design for the whole series; the maximum height is only 820mm.

» With fast cooling and heating functions.

» Connection pipe is 75m at the most.

» All DC inverter design.

» With low ambient temperature cooling function, cooling is normal at -15°C.

## Indoor Unit

## Duct type

» Wired controller can adjust the static pressure according to the engineering requirements.  
» Fresh air interface reserved.  
» Built-in water pump optional.  
» Ultra-thin structure design; the thinnest thickness is 200mm.  
» Supply air outlet and return air outlet are interchangeable, convenient for installation.

## Cassette type

» 360 ° air discharge panel.  
» DC motor and DC water pump, high-efficiency and energy-saving.  
» Water pump lift is up to 1000mm.  
» Only 570mm for 12K and 18K cassette unit.  
» Adopt fireproof electric box.

## Floor ceiling type

» DC motor, high-efficiency and energy-saving.  
» Fresh air interface reversed.  
» Three pipe outlet methods.  
» Dual air guide louvers and 3D air supply.  
» Metal electric box and fireproof design.

Note:<sup>\*</sup>This model is "GUD71W/A1-S"

Capacity index	125	140	160	
Outdoor unit				
Indoor unit	Duct			
	Cassette			
	Floor ceiling			

## Specifications

Model	Outdoor unit		GUD35W/A-S/GUD35W/A-S(LCLH)		Floor ceiling
	Indoor unit		Duct(without water pump)	Duct(with water pump)	
Capacity	Cooling	kW	3.5	3.5	3.5
		Btu/h	11900	11900	11900
	Heating	kW	4.0	4.0	4.0
		Btu/h	13600	13600	13600
	EER/COP		W/W	3.21/3.48	3.21/3.48
	Power supply		Ph/V/Hz	220-240V ~50/60Hz	
Power input	Cooling	kW	1.09	1.09	1.03
		Heating	1.15	1.15	1.1
	Current input	Cooling	A	4.75	4.75
		Heating	A	5	5
Indoor unit	Refrigerant charge volume		kg	1	
	Air flow volume(SH/H/M/L)		CFM	383/353/300/265	383/353/300/265
	ESP		m <sup>3</sup> /h	650/600/510/450	650/600/510/450
Panel	Range	Pa	0-50	0-50	0-50
	Sound pressure level (SH/H/M/L)		dB(A)	40/37/35/34	41/37/35/31
	Dimension (W×D×H)	Outline	mm	700×450×200	570×570×265
Outdoor unit	Package	mm	1008×568×275	1008×568×275	698×653×295
	Net weight/Gross weight		kg	19/23	20/24
	Dimension (W×D×H)	Outline	mm	-	620×620×47.5
Connection pipe	Package	mm	-	-	701×701×125
	Net weight/Gross weight		kg	-	3.0/4.5
	Sound pressure level	dB(A)	51	51	51
Outer diameter	Dimension (W×D×H)	Outline	mm	818×302×596	818×302×596

## Inverter Series Cooling Only(Thailand)

It is a kind of split system that the outdoor unit can be connected to various indoor units (duct, cassette or floor ceiling type) with cooling capacity from 18K to 42K, applicable for operation in Thailand.

- » Design of double ambient temperature sensors makes precise temperature monitoring.
- » With low ambient temperature cooling function, cooling is normal at 5°C.
- » The outdoor unit is universal and can be matched with floor ceiling, cassette or duct type indoor units.

### Indoor Unit

#### Duct type

- » Fresh air inlet and air valve control function improve the indoor air quality.
- » Flexible air inlet/outlet and condensing water outlet direction based on different installation requirements.
- » Optimized air duct design improves the performance and reduces the noise.

#### Cassette type

- » Drain pump filled as standard with increased lift of 1000mm.
- » Special low noise fan design.
- » Different swing angles design for cooling mode and for better comfort.
- » All kinds of air freshener can be installed in the filter, such as catechin.

#### Floor ceiling type

- » 3D air flue design.
- » Easy replacement of motor and fan blade thanks to clamp block propeller design.
- » Different swing angles design for cooling mode and for better comfort.

U-Match Inverter Series Cooling Only (Singapore)  

It is a kind of split system that the outdoor unit can be connected to various indoor units (duct, cassette type) with cooling capacity from 18K to 42K.

Turbo function

High efficiency

Memory function

Compact design

All DC inverter technology

Easier maintainability

- » All DC inverter compressor and DC motor are adopted, the energy efficiency of unit is higher.
- » With quick cooling function.
- » Compact design: the tallest outdoor unit with a single fan is only 820mm.

## Indoor Unit

## Duct type

- » Wired controller can adjust the static pressure according to the engineering requirements.
- » Fresh air interface reserved.
- » Built-in water pump optional.
- » Ultra-thin structure design; the thinnest thickness is 200mm.

## Cassette type

- » 360 ° air discharge panel.
- » DC motor and DC water pump, high-efficiency and energy-saving.
- » Water pump lift is up to 1000mm.
- » Adopt fireproof electric box.

## Control System Lineup

Control system	Product series	Duct type	
Wireless remote controller	YAC1FB1		● ○
	YAW1F9		○ ○
	YAA1FB		○ ○
	YAN1F6		○ ○
	YT1F(MOTO)		○ ○
Wired controller	XK117		● ○
	XE71-42/G		○ ○
WiFi module (G-Cloud) <sup>1</sup>	ME31-00/C4 ME31-00/C6		○ ○
MODBUS gateway	ME50-00/EG(M)		○ ○
Centralized controller (up to 36 indoor units)	CE52-24/F(C)		○ ○
Dry contact gateway <sup>2</sup> (extended function board)	ME30-42/E1		○ ○
Door controller	MK03		○ ○
BACnet gateway	ME30-44/D2(B)		○ ○

Note : ● means standard, ○ means optional.

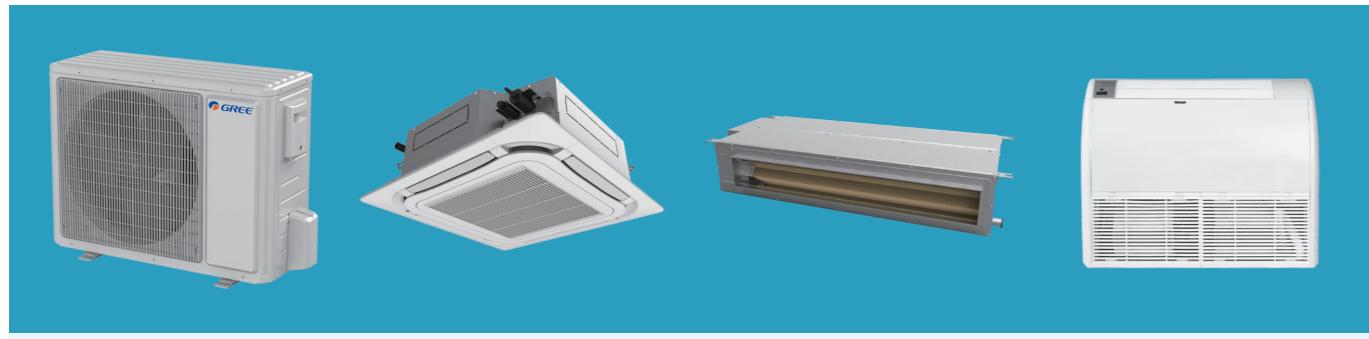

\*1 : Please contact the sales representative for WiFi module selection.

\*2 : Function: ON/OFF input control, emergency stop input, error output, cold plasma control, fresh air control.

## U-Match Inverter Series (Australia)

**INVERTER** **R32**

It is a kind of split system that the outdoor unit can be connected to various indoor units (duct, cassette and floor standing type) with cooling capacity from 5kW to 16kW.

- |                          |                        |                        |                 |                     |                    |                |
|--------------------------|------------------------|------------------------|-----------------|---------------------|--------------------|----------------|
|                          |                        |                        |                 |                     |                    |                |
| Comprehensive protection | Easier maintainability | Intelligent defrosting | High efficiency | Built-in drain pump | Anti-cold function | Compact design |

- » All DC inverter compressor and DC motor are adopted for higher energy efficiency.
- » With fast cooling and heating functions.
- » Maximum connecting pipe up to 75m.
- » Multiple functions for selections: zone control, WiFi, gate control, centralized control, etc.

### Indoor Unit

#### Duct type

- » Drain pump fitted as standard with an increased lift of 1100mm.
- » Fresh air inlet and air valve control function improve the indoor air quality.
- » Flexible air inlet/outlet and condensing water outlet direction according to different installation requirements.
- » Optimized air duct design improves the performance and lowers the noise levels.

#### Cassette type

- » Drain pump fitted as standard with increased lift of 1100mm.
- » Different swing angle design for cooling and heating mode for better comfort.
- » 360° air-charge panel; optional independent swing function.
- » Adopt fireproof electric box.

#### Floor ceiling type

- » DC motor, high-efficiency and energy-saving.
- » With double air louvers, meeting 3D air supply effect.
- » Three pipe outlet methods for easy installation.
- » Pipe joints and electric box are designed at the unit side for convenient installation and maintenance.

Control system	Product series	Duct type	Cassette type	Floor ceiling type
Wired controller	XK117		●	○
	XE71-42/G		○	○
Remote controller	YAP1F6(WiFi)		○	●
	ME31-00/C4 ME31-00/C6		○	○
MODBUS gateway	ME50-00/EG(M)		○	○
Centralized controller (up to 36 indoor units)	CE52-24/F(C)		○	○
Dry contact gateway <sup>*3</sup> (extended function board)	ME30-42/E1		○	○
Door controller	MK03		○	○
Regional controller	Zone controller (LE60-13/GH)		○	○
BACnet gateway	ME30-44/D2(B)		○	○

## Note:

● means standard, ○ means optional.

<sup>\*1</sup>: Controller(cooling only)<sup>\*2</sup>: Please contact the sales representative for WiFi module selection.<sup>\*3</sup>: Function: ON/OFF input control, emergency stop input, error output, cold plasma control, fresh air control.

# Big Duct Type Unit

Unit capacity: 20-60kW, suitable for a variety of installation occasions.

Operation range: -7~48°C for cooling and -15~24°C for heating.

Powerful cooling and heating capacity, convenient for installation and easy for after-sales service.

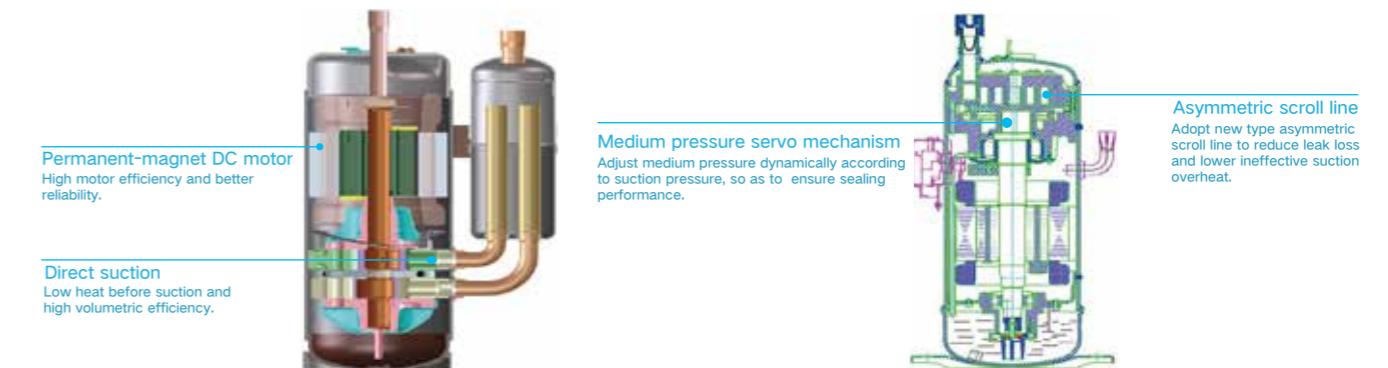

Applicable for large space areas, such as hotels, restaurants, meeting rooms, supermarkets and factories.

## 1 Energy-efficient • Comfortable

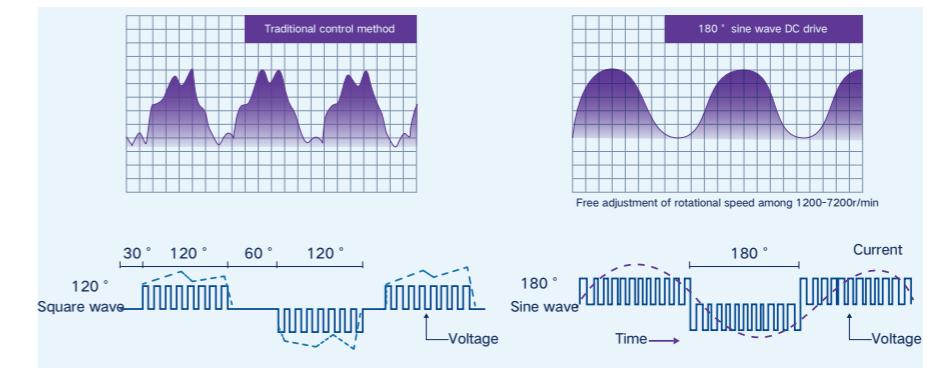

It adopts DC motor and the compressor's drive program is optimized. The lowest operation frequency is lowered and the compressor's output is decreased, more energy-saving and efficient.

### Application of DC inverter compressor

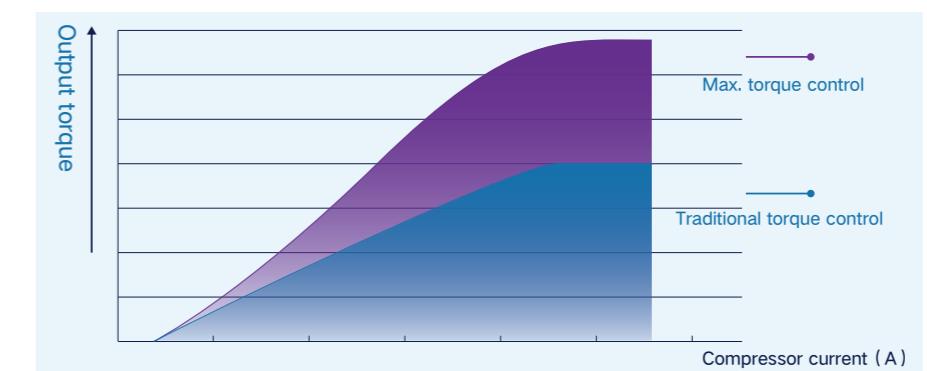

### Inverter 180 ° sine wave technology

» Thanks to inverter 180° sine wave technology, output of compressor is much smoother and fluctuation of temperature is smaller, more energy-saving and comfortable.

### Torque control technology

» Thanks to the minimum current and maximum torque control technology, the minimum current can output the maximum torque, reducing the consumption of motor winding and intelligent power module for higher efficiency.

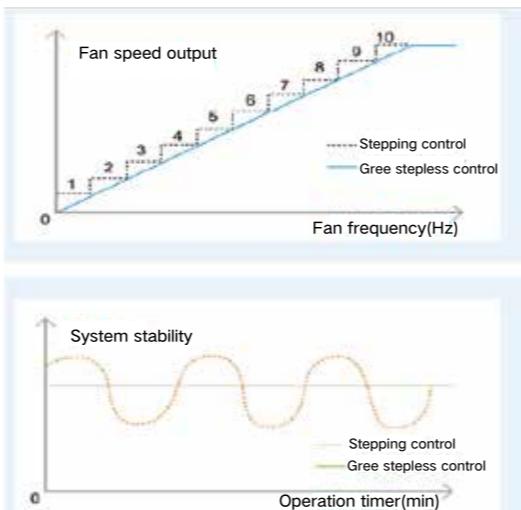

## Inverter fan control technology

» DC inverter motor is adopted with reserved outlet air static pressure, energy-saving function and quiet function etc., being able to achieve stepless speed control within 5Hz~75Hz. Stepless inverter fan control is more precise compared with multiple speed adjustment.

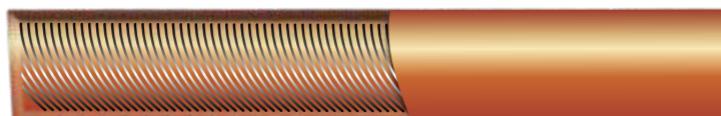

» Fan speed is adjusted precisely according to the demand of heat exchange amount, which effectively ensures system pressure maintained in most optimized status and greatly improves motor efficiency.

\*Not applicable for 50-60kW fixed-speed units.

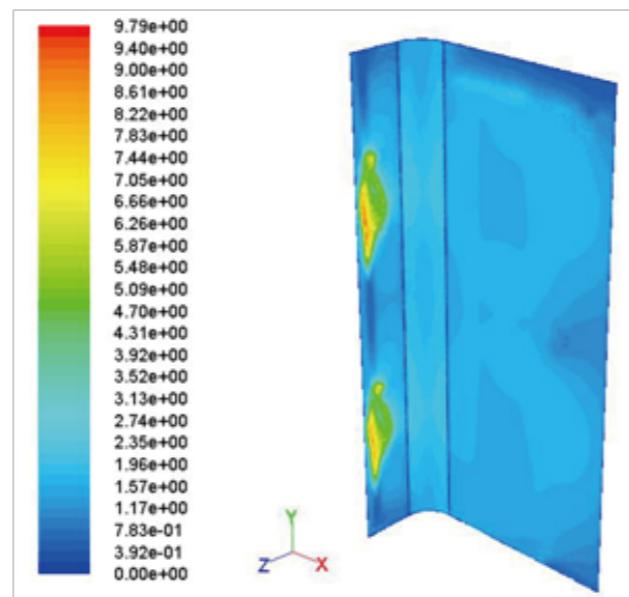

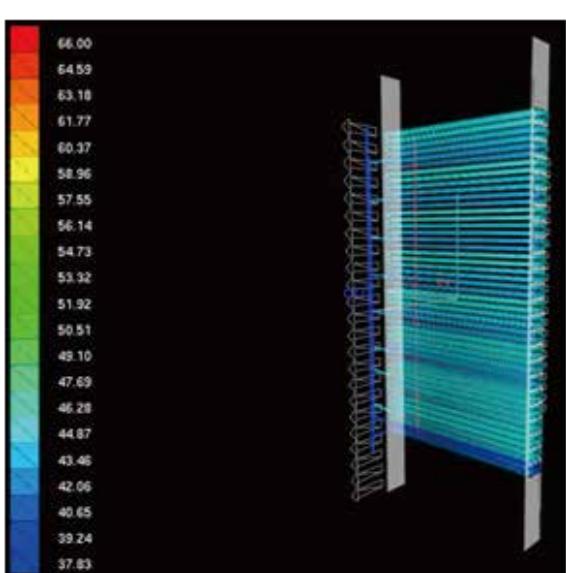

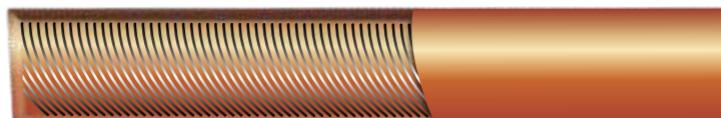

## Condenser simulation design

» Condenser adopts fine-draw fins and inner-threaded heat exchange pipe. Through simulation of wind field and stream, condenser heat exchange effect is greatly improved.

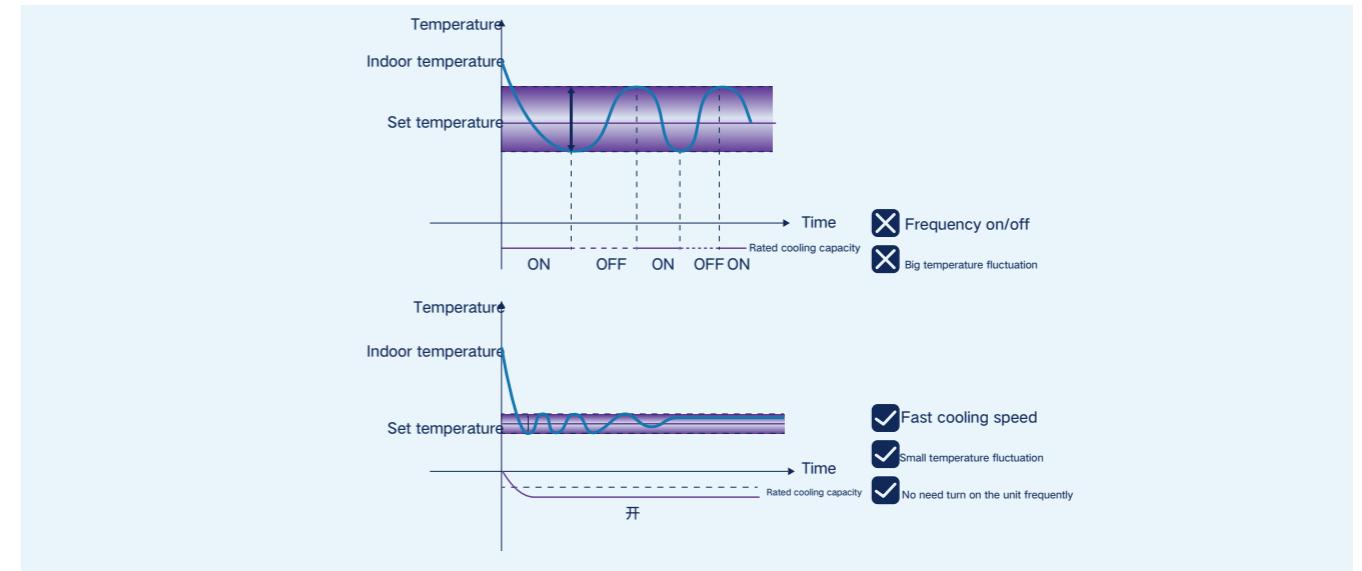

Inner-threaded pipe

## PID control technology

» Adopt smart PID capacity adjustment technology for quickly and accurately reaching set temperature. The comfort in the room is greatly improved thanks to small temperature fluctuation.

## 2 Constant Air Volume • High Static Pressure

### High static pressure design

» The air outlet static pressure of unit is up to 250Pa, with further air supply distance, suitable for various places.  
» Users can freely adjust the static pressure among 0~250Pa according to the actual requirements, with high engineering adaptability.

### Constant air volume control

» Thanks to automatic constant air volume function, the unit can freely and intelligently adjust the fan for maintaining constant air volume output, convenient and reliable.  
» Constant air volume is controlled by the current of motor.

### Smart filth blockage cleaning reminder

» The whole series indoor units have been equipped with filters for filtrating the sundries and hair in the air. The filth blockage of unit can be predicted by monitoring motor current and the change of rotation speed. The wired controller smartly reminds the user for cleaning.

## 3 Eco-friendly • Reliable

### CAN-Bus communication technology

» Non-polar communication with strong resistance against electromagnetic interference. Specialized shield wire is not needed for communication between units. Common communication wires can be used.

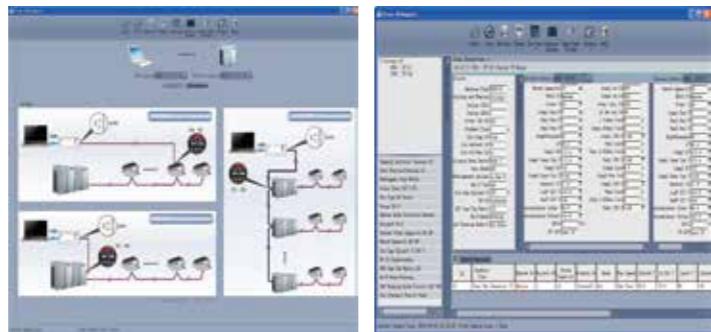

## High reliability design of compressor

- » Compressor adopts the technology to achieve sufficient oil supply, little abrasion and stable operation.
- » High-efficiency oil separation: Effectively prevent rotary oil return and reduce oil wound up to top of the motor.
- » High-efficiency oil supply: Oil pipe design ensures sufficient oil supply.
- » Non-contact oil film seal: Axial and radial direction of compressor adopts non-contact seal. With oil film seal of lubricant, there is little abrasion.
- » Lubricant cleaning: Impurities generated during running-in period will be absorbed to ensure lubricant cleanness.

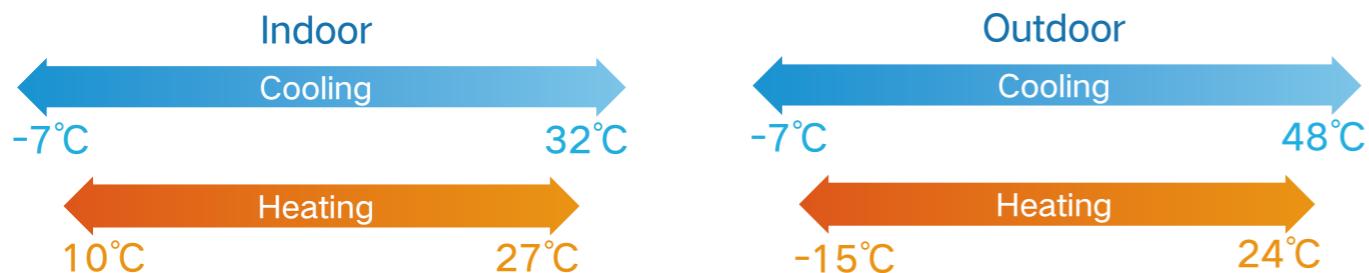

## Perfect protection measures and accurate fault diagnosis

- » Perfect protection measures, accurate fault diagnosis and corresponding protections can ensure reliable and safe operation.
- » There are a series of protection, such as active frequency-decreasing protection of compressor, freezing prevention protection, high pressure protection, low pressure protection, high discharge temperature protection, overload protection, sensor fault protection and temperature fault protection.
- » Easy malfunction diagnosis: Debugging software can be connected to realize real-time monitor on running status and acquire malfunction data.

## Wide Range of Running Temperature

- » DC motor is adopted. With precise control on high pressure, temperature range for cooling is wider.

## Wide range of operation voltage

- » Voltage between 342V~456V is applicable, which can better cope with the voltage fluctuation.

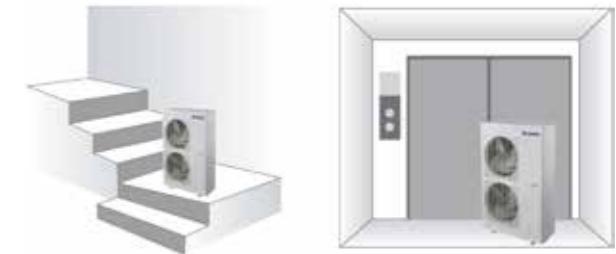

**Side Discharge DC Inverter**

## 4 Maintenance • Convenience

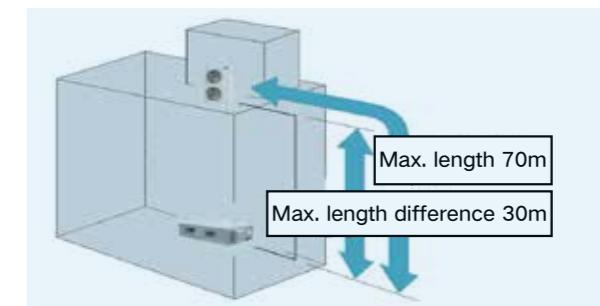

### Side discharge casing, convenient for installation

- » The size of side discharge casing is smaller and the weight is lighter, which saves space greatly. The floor space will decrease by 30% and loading quantity will increase by 20%;
- » Flexible transportation, move in/out the passenger elevator directly; it can be installed in the wall, convenient for the installation.

### Long connection pipe with big height difference

- » Connection pipe between indoor and outdoor units can be as long as 70m; the max allowable height difference between indoor unit and outdoor unit is 30m.

# Big Duct Type Unit High Capacity Series

**INVERTER** R410A

It is a kind of split system that can be connected with air duct to realize cooling/heating in large space.

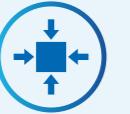

20/25/30kW

40/50/60kW

Intelligent defrosting

Compact design

Comprehensive protection

Easier maintainability

Self-diagnosis

Wide operation range

- » DC inverter for high efficiency and energy saving.
- » High static units for longer ducted runs.
- » ESP is up to 250Pa.\*
- » Static pressure is adjustable.
- » Indoor fan can be adjusted according to the static pressure of air duct installed by customers.

\*This function is only fit for 20~40kW product models

## Control System Lineup

Control system	Product series	Duct split unit
Wired controller	XK46	
	XE7A-24/H	
	XE70-33/H	
	JS13	
	LE60-24/H1	
Remote controller	YAP1F	
MODBUS gateway	ME30-24/E7(M)	
Centralized controller (up to 36 indoor units)	CE52-24/F(C)	

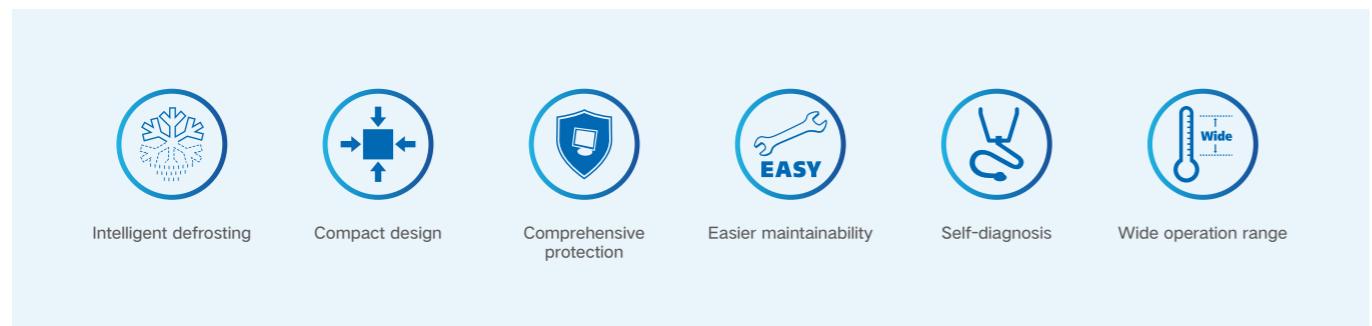

Note:

● means standard, ○ means optional. Smart zone controller should be chosen with wired controller at the same time.

# Big Duct Type Unit (Australia)

R410A

It is a kind of split system that can be connected with air duct to realize cooling/heating in subdivided area. High static pressure indoor unit is designed, convenient for installation and maintainance, saving labor and time.

20kW

- » Removable and reconfigurable indoor unit for easy maintenance.
- » All DC inverter design, fast cooling and heating, high-efficiency and energy-saving.
- » Anti-corrosive black coating fins, adaptable to severe environment.
- » Multiple control methods, connectable to BMS or zone control.

Item	Nominal Operating Condition				Operating Range

## Air-cooled Packaged Unit

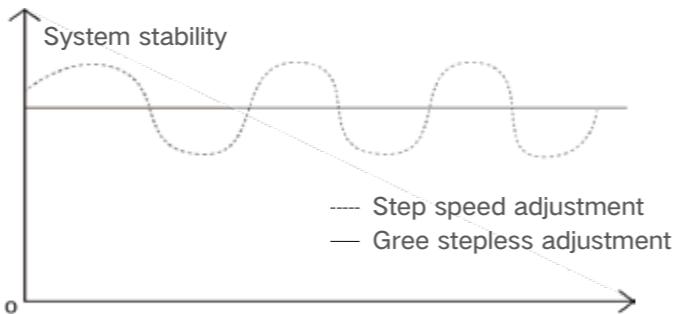

10HP big cooling capacity and 4000m<sup>3</sup>/h circulation air volume for turbo cooling and heating, applicable for office buildings, meeting rooms, hospitals, shopping malls, restaurants, hotels and supermarkets.

## 1 Exquisite technique makes comfort ubiquitous

### DC inverter technology, comfortable and energy-saving

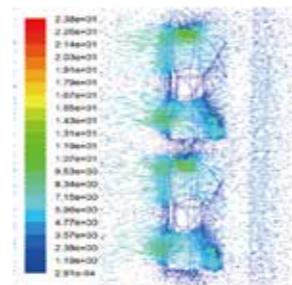

» Adopt DC inverter scroll compressor, with higher compression efficiency and wider operation frequency range.

» By adopting DC inverter fan, the efficiency is higher, the noise is lower and the control precision for stepless speed regulation is higher. Cooling is available under the ambient temperature range of -5°C ~ 52°C.

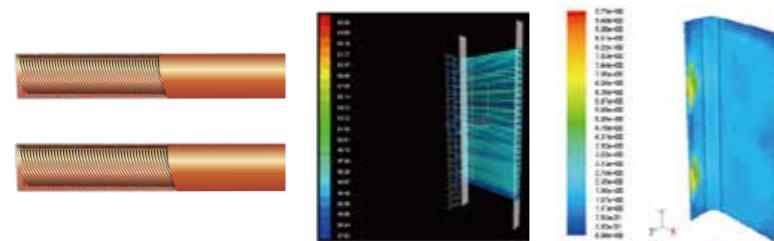

### Unique fan design for the optimal heat exchange

» Adopt a brand new fan design and unique installation method for motor, which enhances fan efficiency and heat exchange effect, effect. At the same time, fan vibration will be decreased and the comfort will be improved.

### Condenser simulation design for the optimal heat exchange

» Condenser adopts fine-draw fins and inner-threaded heat exchange pipe. Through simulation of wind field and stream, condenser heat exchange effect is greatly improved.

### Wide-angle air supply, comfortable everywhere

» Adopt wide air flow design and adopt high-efficiency centrifugal blades for wide-angle and long-distance air supply, creating natural and comfortable indoor environment.

### Refreshing appearance, fashionable and versatile

» Depth of slim indoor unit is as low as 0.4M for small occupation space, with black and white colors, fashionable and concise.

### Smart design for comfort

» Power-off memory function: Once power failure occurs during operation, the controller can memorize the operation status before power failure. When power recovered, the unit operates under the set modes before power failure.

» 24h timer ON and timer OFF; set 24h timer ON and timer OFF by the wired controller.

» Smart monitoring: Optional gateway and MODBUS protocol for realizing remote control.

» PID algorithm adjustment: Automatically adjust the frequency according to the difference between room temperature and set temperature. When there's big difference between room temperature and set temperature, turbo heating/cooling will be activated; when room temperature is almost the same as set temperature, output capacity will be decreased to maintain the stability.

## 2 Excellent quality, more reliable operation

### High quality and excellent performance

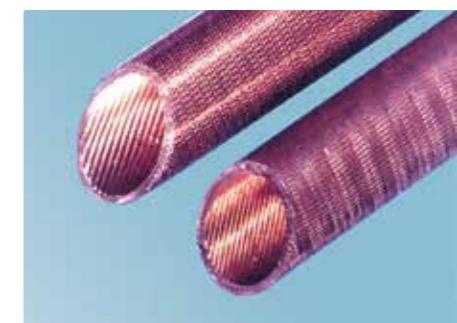

» The unit adopts high-quality parts for reliable operation

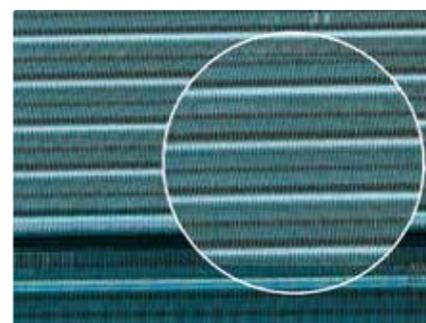

High-efficiency DC inverter compressor with intelligent PID capacity adjustment for quick and accurate control, with small temperature fluctuation.

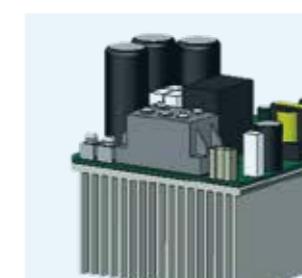

Adopt DC inverter motor for stable operation, higher efficiency and lower noise

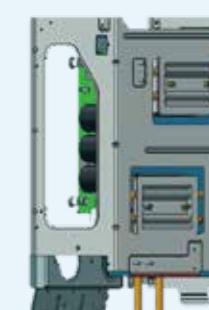

Adopt high-quality seamless inner groove copper pipe for greatly increasing heat exchange efficiency.

Adopt unique hydrophilic aluminum foil for smoother heat transfer and higher heat efficiency.

Common heat radiation

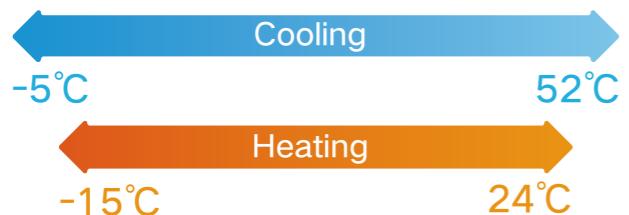

Refrigerant cooling

### Heat dissipation with refrigerant, reliable operation

» Generally, air-cooled fin is adopted for the compressor drive board for heat dissipation, but the size of fin is quite big, thus radiation heat loss is limited. Especially when the ambient temperature is high, heat dissipation requirement cannot be fulfilled. The electric component is easy to be damaged.

» By adopting refrigerant cooling drive board mode, the size will decrease 30%, thus ensuring reliable operation of compressor when ambient temperature is 52°C.

Wide operation range (-15°C to 52°C)

Voltage range for operation is wider, safe and reliable

» The designed air-cooled unit of 96,000 Btu/h can keep stable operation under wider voltage range (342V-456V), thus ensuring the safety of the unit and the staff.

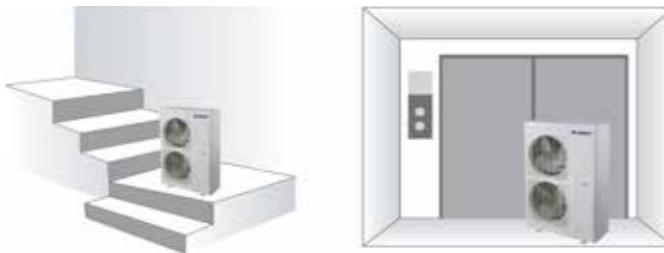

### ③ Humanized design, convenient for installation

#### Side discharge casing, convenient for installation

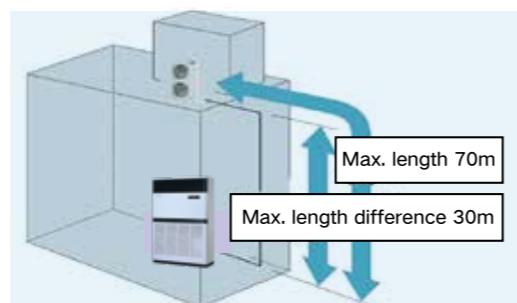

» The size of side discharge casing is smaller and the weight is lighter, which saves space greatly. The floor space will decrease by 30% and loading quantity will increase by 20%;

» Flexible transportation: it can be moved in or moved out of the passenger elevator. It can be installed in the wall, convenient for installation.

#### Long pipes design, several installation choices

» The length of the pipe which connects IDU and ODU is 50m, and the max design fall is 30m, providing several installation choices for the user.

» Thanks to flexible mounting base and 5-way outlet pipe design, installation difficulty and labor cost are greatly decreased.

» Size of inverter outdoor unit is smaller, reducing 40% of floor space compared with the fixed-speed unit;

» Adopt new generation communication protocol; wiring between indoor unit and outdoor unit is simplified; you can select the power cord according to the requirement for communication.

### Air-cooled packaged Unit

**INVERTER** **R410A**

It is widely applicable to public places such as shopping malls, restaurants, ball rooms, meeting rooms, supermarkets, etc., creating a comfortable and pleasant environment for you.

- » DC inverter technology, comfortable and energy-saving.
- » Side discharge casing, convenient for installation.
- » Adopt drive board heat dissipation with refrigerant for reliable operation.
- » Long pipes design; with several installation choices.
- » Wide operation range.
- » Wider voltage range for operation, safe and reliable.
- » Unique fan design for the optimal heat exchange.

Centralized controller (up to 36 indoor units)	CE52-24/F(C)	

Note:

● means standard, ○ means optional.

# Rooftop Packaged Unit

It adopts DC inverter design with capacity ranging from 5.5 tons to 30 tons. Side supply and side return air discharge way are applied. It can be installed in rooftop and outdoor flat floor, which is applicable for shopping malls, hotels, halls, apartments, villas and other buildings.

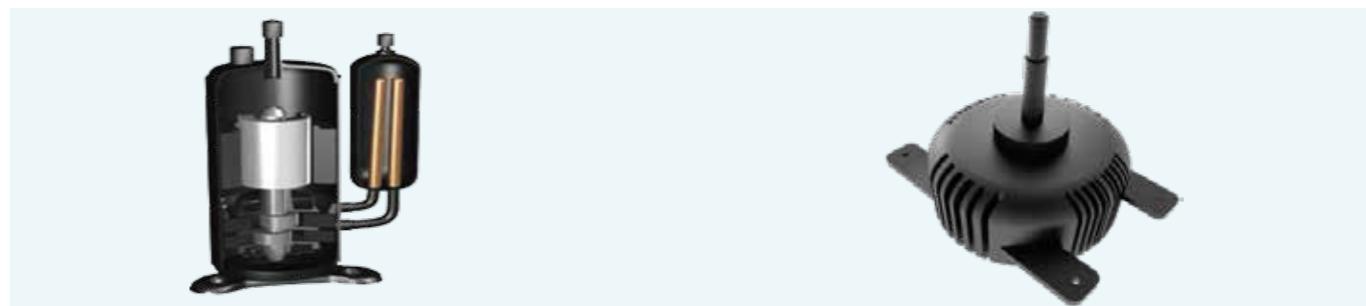

## 1 High Energy Efficiency and Performance

The compressor and outdoor fan can adjust the operating frequency according to different room loads, and automatically adjust the capacity output to ensure the comfort of the room environment. At the same time, the power consumption of the unit changes along with the capacity output and the power consumption of unit is low in low-load operation. Compared with the fixed-speed unit, its annual power consumption is lower, which is high-efficiency and power-saving.

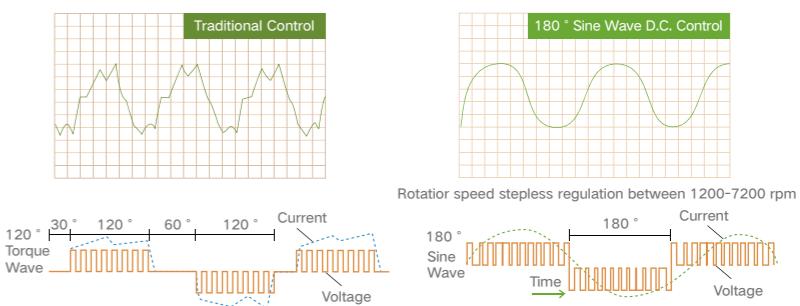

### Energy-efficient compressor

» The whole series adopt DC inverter compressor, and the compressor will adjust the frequency intelligently. Temperature control is accurate; energy efficiency and reliability are high.

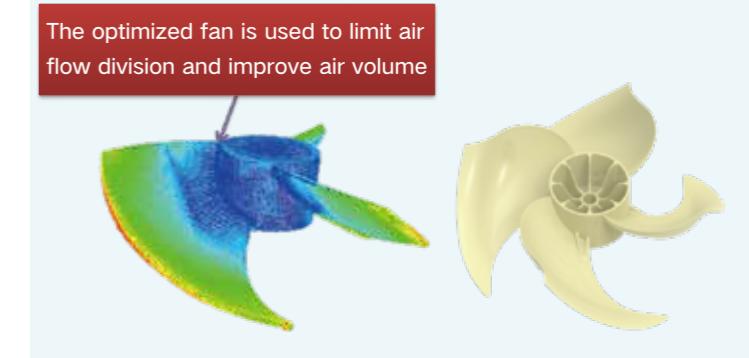

### 180 ° sine wave DC speed change technology

» The output wave of 180 ° current is the smooth sine wave. It contains little harmonic wave, and has small torque fluctuation and large adjustment range. The motor can operate stably that can meet the requirements of different occasions, saving the electricity power and ensuring the utmost comfort of users.

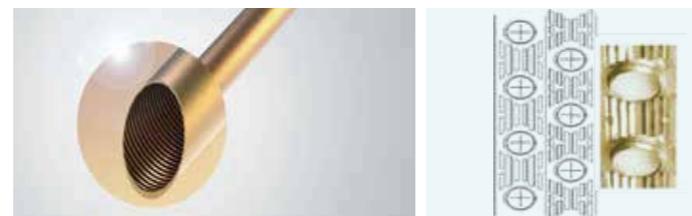

### High-efficient fan blade

» New high-efficiency fan blade design adopts CFD simulation technology to optimize the matching of blade type and blade angle. In addition to the special trail edge design, the working area of blade is effectively increased and the air volume is greatly increased.

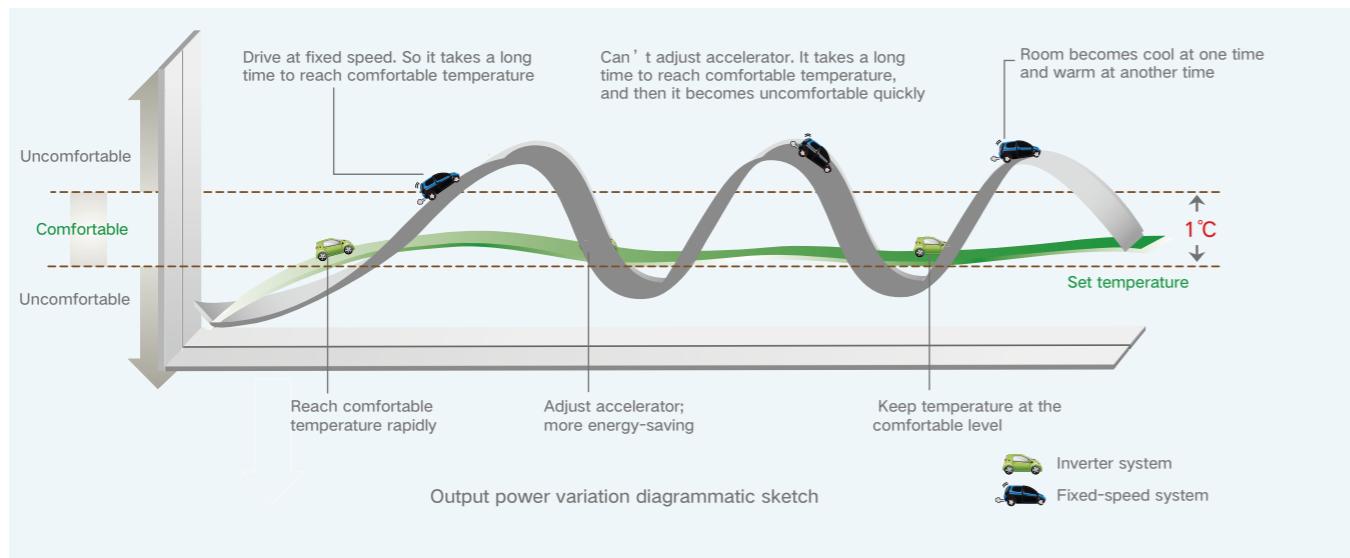

## High-efficiency heat exchanger

» The heat exchanger adopts window opening and inner groove copper pipe structure, which is of high heat exchange efficiency.

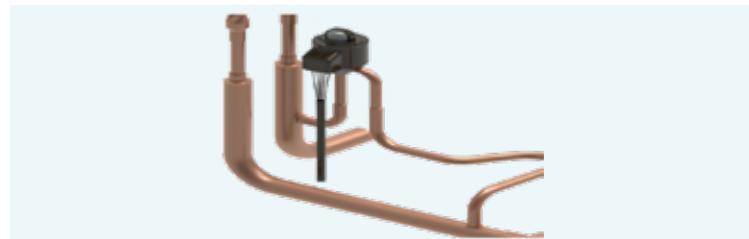

## Precise temperature control technology

» GREE intelligent inverter control delivers the required capacity according to the load variation from 10% to 120% and maintains the room temperature fluctuation 1°C of set temperature.

## Automatic adjustment of throttling

» Electronic expansion valve adjusts the opening degree automatically. It makes sure that the system parameters are within a reasonable range when the unit operates under all working conditions, to improve the operation reliability and service life of the unit.

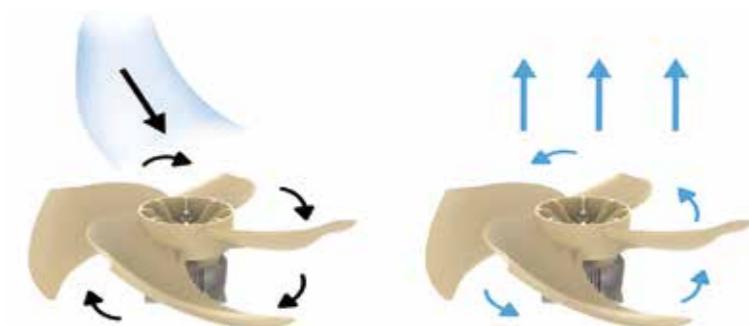

## Excellent grid adaptability

» Gree Rooftop units adopt strong anti-grid fluctuations design, with stable performance in ultra wide voltage range from 342V to 456V, which is perfectly adapted to the power grid fluctuation during peak hours or other conditions.

## Anti-wind design of outdoor fan

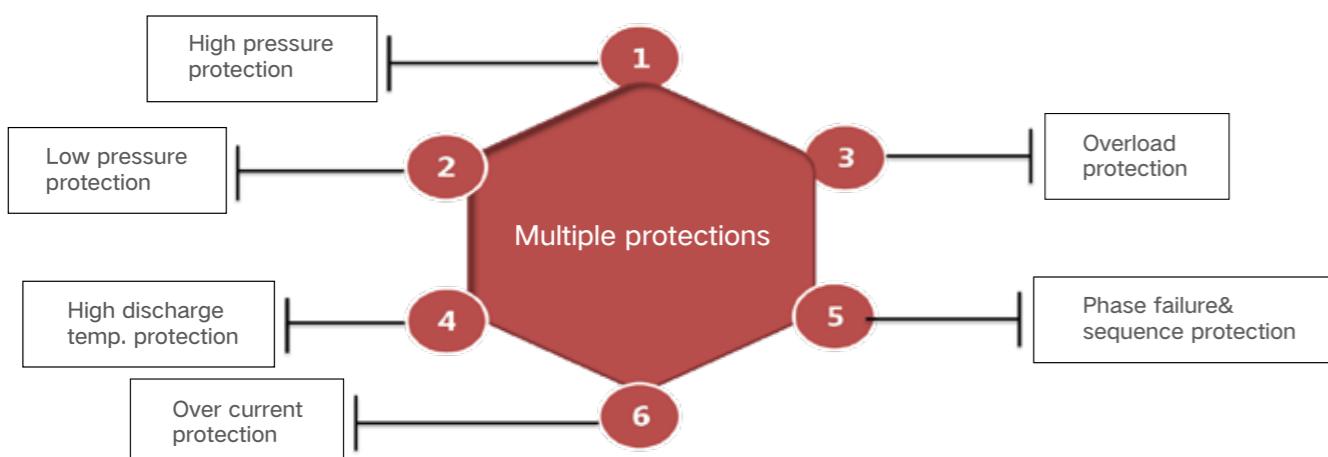

» Anti-wind startup design is used to solve the problem that the unit cannot start smoothly in the reverse operation under the high wind environment. The anti-wind startup design allows the unit to adapt to the harsh windy environment and start reliably. The outdoor fan runs smoothly, which is safer and more reliable.

## 2 High Reliability

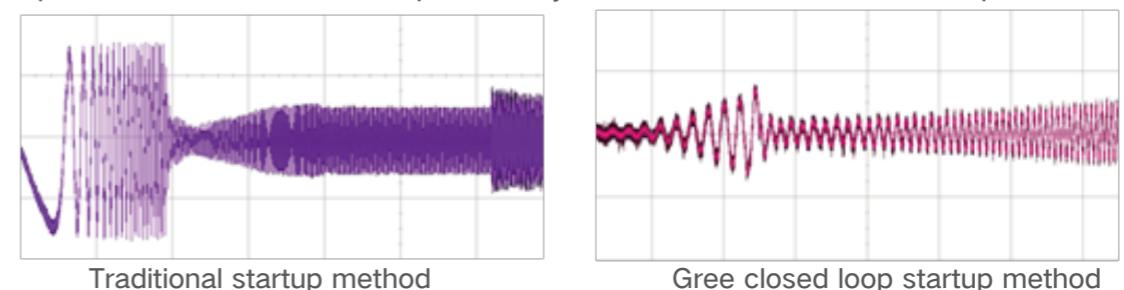

### High-efficiency heat exchanger

» Gree Rooftop units are designed with high voltage protection, low voltage protection, overcurrent protection, discharge protection, phase sequence protection and other protections. It can effectively protect key components such as compressors and motors.

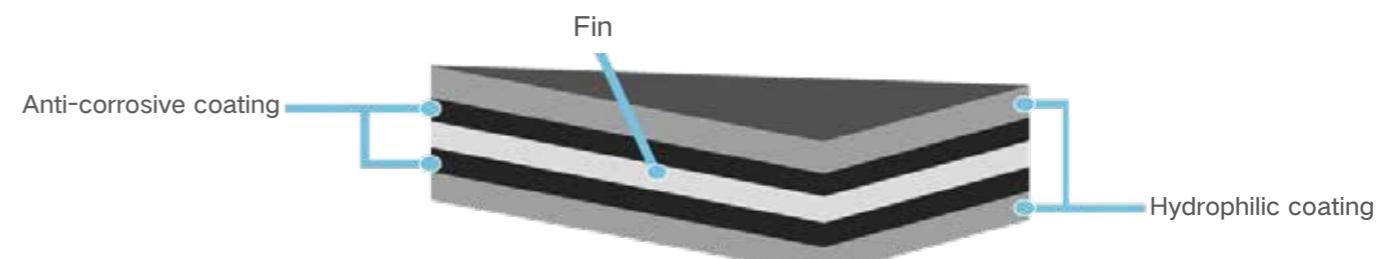

## Compressor closed loop startup technology

» Adopts the self-innovated closed loop startup control mode to make the output torque rapidly follow the load torque, which needs small startup electricity current, more reliable for startup.

## Anti-corrosive heat exchanger

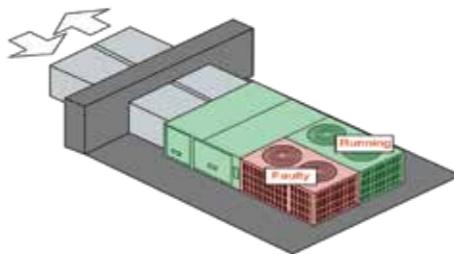

» The outdoor heat exchanger fins are treated with anti-corrosive golden coating to pass the 1000h neutral spray test, which has good corrosion resistance.

## 3 More Convenient & Comfortable

### Emergency operation design

» The 30-ton unit is designed with two systems, whose operation control is flexible and convenient. When one system is faulty, it can enter the emergency operation control, while the other system will start up to operate. The operation time of emergency operation mode should be controlled within 48h, and you should contact the after-sale service as soon as possible.

### Control of dual wired controllers

» In order to provide convenient operation to users, we develop the dual wired controllers control function. In this case, the user can install the wired controller in different places for convenient operation.

### Cold air prevention function

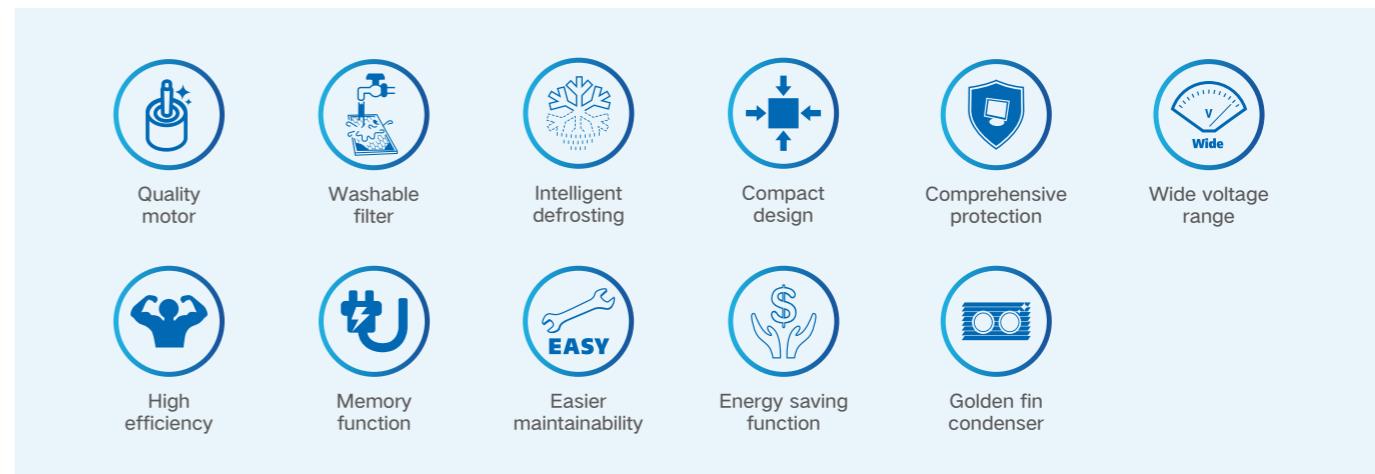

» When the unit just starts heating or the outdoor unit just finishes defrosting, the temperature of indoor evaporator is quite low. If the indoor fan operates in this case, cold air will blow out. Our products are optimized in design to prevent cold air so as to improve users' comfort.

### Power-off memory function

» The user can set power-off memory function. If this function is activated, the unit will automatically operate in previous setting mode when power recovers after power failure.

## DC Inverter Rooftop Packaged Unit(Heat Pump)

It adopts DC inverter design with capacity range from 5.5 tons to 30 tons. Side supply and side return air discharge way is applied. It can be installed in rooftop and outdoor flat floor, which is applicable for shopping malls, hotels, halls, apartments, villas and other buildings.

- » The whole series adopt DC inverter compressor, and the compressor will adjust the frequency intelligently. Temperature control is accurate; energy efficiency and reliability are high.
- » The outdoor side applies DC inverter motor with high back electromotive force. The efficiency is greatly improved compared with the AC motor.
- » Adopts the self-innovated closed loop startup control mode to make the output torque rapidly follow the load torque, which needs small startup electricity current, more reliable for startup.

» New high-efficiency fan blade design adopts CFD simulation technology to optimize the matching of blade type and blade angle. In addition to the special trail edge design, the working area of blade is effectively increased and the air volume is greatly increased.

» The working area of blade is effectively increased and the air volume is greatly increased.

» Gree Rooftop units are designed with high voltage protection, low voltage protection, overcurrent protection, discharge protection, phase sequence protection and other protections.

» Gree Rooftop units adopt strong anti-grid fluctuations design, with stable performance in ultra wide voltage range from 342V to 456V.

» Anti-wind startup design is used to solve the problem that the unit cannot start smoothly in the reverse operation under the high wind environment.

» The outdoor heat exchanger fins are treated with anti-corrosive golden coating to pass the 1000h neutral spray test, which has good corrosion resistance.

» The sheet metal of base is made of thick galvanized steel sheet. It is designed with forklift holes and hanging holes, so that you can choose forklifting or hanging during installation, which is flexible and convenient.

» Centralized control is available without connecting the wired controller, and 36 sets of unit can be controlled at the same time at most.

Item	Nominal operating condition(temperature)				Operating range(temperature)
	Outdoor condition		Indoor condition		Outdoor condition

## Control System Lineup

Control System		Product Series	Rooftop Packaged Unit
Wired remote controller	XK117		●
Centralized controller (up to 36 indoor units)	CE52-24/F(C)		○
Dry contact gateway*1 (extended function board)	ME30-42/E1		○
MODBUS gateway	ME50-00/EG(M)		○

Note:

● means standard, ○ means optional.

\*1: Function: ON/OFF input control, emergency stop input, error output, cold plasma control, fresh air control.
